Advanced Subsidiary GCE

**Mark Scheme for June 2018**

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, Cambridge Nationals, Cambridge Technicals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

© OCR 2018

## Annotations

Annotation	Meaning
	Point has been seen and noted
	Indicates questionable points / comments
	Must be used on all blank pages where there is no candidate response
	Irrelevant; a significant amount of material that does not answer the question
	Level 1
	Level 2
	Level 3
	Level 4
	Rubric error (place at start of Question not being counted)
	Highlighting an issue e.g. irrelevant paragraph. Use in conjunction with another stamp e.g IRRL

**Subject-specific Marking Instructions****INTRODUCTION**

Your first task as an Examiner is to become thoroughly familiar with the material on which the examination depends. This material includes:

- the specification, especially the assessment objectives
- the question paper and its rubrics
- the mark scheme.

You should ensure that you have copies of these materials.

You should ensure also that you are familiar with the administrative procedures related to the marking process. These are set out in the OCR booklet **Instructions for Examiners**. If you are examining for the first time, please read carefully **Appendix 5 Introduction to Script Marking: Notes for New Examiners**.

**USING THE MARK SCHEME**

Please study this Mark Scheme carefully. The Mark Scheme is an integral part of the process that begins with the setting of the question paper and ends with the awarding of grades. Question papers and Mark Schemes are developed in association with each other so that issues of differentiation and positive achievement can be addressed from the very start.

This Mark Scheme is a working document; it is not exhaustive; it does not provide 'correct' answers. The Mark Scheme can only provide 'best guesses' about how the question will work out, and it is subject to revision after we have looked at a wide range of scripts.

The Examiners' Standardisation Meeting will ensure that the Mark Scheme covers the range of candidates' responses to the questions, and that all Examiners understand and apply the Mark Scheme in the same way. The Mark Scheme will be discussed and amended at the meeting, and administrative procedures will be confirmed. Co-ordination scripts will be issued at the meeting to exemplify aspects of candidates' responses and achievements; the co-ordination scripts then become part of this Mark Scheme.

Before the Standardisation Meeting, you should read and mark in pencil a number of scripts, in order to gain an impression of the range of responses and achievement that may be expected.

In your marking, you will encounter valid responses which are not covered by the Mark Scheme: these responses must be credited. You will encounter answers which fall outside the 'target range' of Bands for the paper which you are marking. Please mark these answers according to the marking criteria.

Please read carefully all the scripts in your allocation and make every effort to look positively for achievement throughout the ability range. Always be prepared to use the full range of marks.

**LEVELS OF RESPONSE QUESTIONS:**

The indicative content indicates the expected parameters for candidates' answers, but be prepared to recognise and credit unexpected approaches where they show relevance.

Using 'best-fit', decide first which set of level descriptors best describes the overall quality of the answer. Once the level is located, adjust the mark concentrating on features of the answer which make it stronger or weaker following the guidelines for refinement.

**Highest mark:** If clear evidence of all the qualities in the level descriptors is shown, the HIGHEST Mark should be awarded.

**Lowest mark:** If the answer shows the candidate to be borderline (i.e. they have achieved all the qualities of the levels below and show limited evidence of meeting the criteria of the level in question) the LOWEST mark should be awarded.

**Middle mark:** This mark should be used for candidates who are secure in the level. They are not 'borderline' but they have only achieved some of the qualities in the level descriptors.

Be prepared to use the full range of marks. Do not reserve (e.g.) highest level marks 'in case' something turns up of a quality you have not yet seen. If an answer gives clear evidence of the qualities described in the level descriptors, reward appropriately.

Quality of extended response will be assessed in questions marked with an (\*). Quality of extended response is not attributed to any single assessment objective but instead is assessed against the entire response for the question.

	<b>AO1</b>	<b>AO2</b>	<b>AO3</b>	<b>Quality of extended response</b>
<b>Comprehensive</b>	A wide range of detailed and accurate knowledge that demonstrates fully developed understanding that shows full relevance to the demands of the question. Precision in the use of question terminology.	Knowledge and understanding shown is consistently applied to the context of the question, in order to form a:  clear, developed and convincing analysis that is fully accurate.  clear, developed and convincing interpretation that is fully accurate.  detailed and substantiated evaluation that offers secure judgements leading to rational conclusions that are evidence based.	Quantitative, qualitative and/or fieldwork skills are used in a consistently appropriate and effective way and with a high degree of competence and precision.	There is a well-developed line of reasoning which is clear and logically structured. The information presented is relevant and substantiated.
<b>Thorough</b>	A range of detailed and accurate knowledge that demonstrates well developed understanding that is relevant to the demands of the question. Generally precise in the use of question terminology.	Knowledge and understanding shown is mainly applied to the context of the question, in order to form a :  clear and developed analysis that shows accuracy.  clear and developed interpretation that shows accuracy.  detailed evaluation that offers generally secure judgements, with some link between rational conclusions and evidence.	Quantitative, qualitative and/or fieldwork skills are used in a suitable way and with a good level of competence and precision.	There is a line of reasoning presented with some structure. The information presented is in the most-part relevant and supported by some evidence.

	<b>AO1</b>	<b>AO2</b>	<b>AO3</b>	<b>Quality of extended response</b>
<b>Reasonable</b>	Some sound knowledge that demonstrates partially developed understanding that is relevant to the demands of the question. Awareness of the meaning of the terms in the question.	Knowledge and understanding shown is partially applied to the context of the question, in order to form a:  sound analysis that shows some accuracy.  sound interpretation that shows some accuracy.  sound evaluation that offers generalised judgements and conclusions, with limited use of evidence.	Quantitative, qualitative and/or fieldwork skills are used in a mostly suitable way with a sound level of competence but may lack precision.	The information has some relevance and is presented with limited structure. The information is supported by limited evidence.
<b>Basic</b>	Limited knowledge that is relevant to the topic or question with little or no development. Confusion and inability to deconstruct terminology as used in the question.	Knowledge and understanding shows limited application to the context of the question in order to form a:  simple analysis that shows limited accuracy.  simple interpretation that shows limited accuracy.  Un-supported evaluation that offers simple conclusions.	Quantitative, qualitative and/or fieldwork skills are used inappropriately with limited competence and precision.	The information is basic and communicated in an unstructured way. The information is supported by limited evidence and the relationship to the evidence may not be clear.

Question		Answer	Marks	Guidance
1	(a)	<p><b>Explain two methods used to reconstruct past climates.</b></p> <ul style="list-style-type: none"> <li>• Ice cores (✓) contain air which records the gaseous composition at the time of freezing (✓) Lower frequency of hydrogen and oxygen atoms suggest colder climate. (✓)</li> <li>• Tree rings (✓) show the age of trees as well as the climatic conditions (✓) – the wider the ring the more growth due to warmer climate and more moisture availability. (✓)</li> <li>• Fossils of plants and animals (✓) can be used to suggest what the climate was like (✓) as plants and animals require specific conditions to survive. (✓)</li> <li>• Sea-floor sediments (✓) are made up of shells of foraminifera (✓), the chemical composition of which can be used to indicate ocean temperature (✓).</li> <li>• Lake sediments (✓) contain pollen, spores and diatoms which can be used to infer climatic conditions (✓) based on vegetation types. (✓) Varves can be used to identify seasonal variations. (✓)</li> </ul>	4	<p><b>AO1 – 4 marks</b></p> <p>2 x 2 mark (✓) for each correct method and explanation.</p> <p>Only two methods can be credited.</p>
	(b)	<p><b>Suggest how changes in atmospheric factors influence the global mean energy balance.</b></p> <p><b>Level 3 (5-6 marks)</b> Demonstrates <b>thorough</b> knowledge and understanding of the global mean energy balance (AO1).</p> <p><b>Place specific details</b> should be <b>accurate</b> with the amount helping determine where within the level the response lies.</p> <p>Demonstrates <b>thorough</b> application of knowledge and understanding to provide an <b>accurate, clear</b> and <b>developed analysis</b> as to how changes in atmospheric factors influence the global mean energy balance (AO2).</p>	6	<p><b>AO1 – 3 marks</b></p> <p>Knowledge and understanding of the global mean energy balance could potentially include:</p> <ul style="list-style-type: none"> <li>• It is a closed system</li> <li>• Input is solar radiation and output is terrestrial radiation.</li> <li>• Balanced inputs and outputs (i.e. Global Mean Energy Balance) result in stable temperatures</li> <li>• Atmospheric factors include the make-up of the atmosphere / gaseous composition / cloud cover</li> <li>• 1/3 incoming solar radiation is reflected by clouds</li> </ul>

Question	Answer	Marks	Guidance
	<p><b>Level 2 (3-4 marks)</b> Demonstrates <b>reasonable</b> knowledge and understanding of the global mean energy balance (AO1).</p> <p><b>Place specific</b> material is present which is <b>partially accurate</b> with the amount helping determine where within the level the response lies.</p> <p>Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a <b>sound analysis</b> showing some accuracy and development as to how changes in atmospheric factors influence the global mean energy balance (AO2).</p> <p><b>Level 1 (1-2 marks)</b> Demonstrates <b>basic</b> knowledge and understanding of the global mean energy balance (AO1).</p> <p>Little or no <b>place specific</b> material is present and or is inaccurate.</p> <p>Demonstrates <b>basic</b> application of knowledge and understanding to provide a <b>simple analysis</b> showing limited accuracy and little development as to how changes in atmospheric factors influence the global mean energy balance (AO2).</p> <p><b>0 marks</b> No response worthy of credit.</p>		<ul style="list-style-type: none"> <li>• 1/3 outgoing radiation is absorbed by greenhouse gases including CO<sub>2</sub>, CH<sub>4</sub> and water vapour.</li> </ul> <p><b>AO2 – 3 marks</b></p> <p>Application of knowledge and understanding to analyse how atmospheric factors influence the global mean energy balance could potentially include:</p> <ul style="list-style-type: none"> <li>• An increase in greenhouse gases means more terrestrial radiation is absorbed and reflected back to earth increasing the temperature.</li> <li>• Higher temperatures increase evaporation which increases cloud coverage and amount of water vapour in the atmosphere.</li> <li>• Volcanic eruptions emitting ash into the atmosphere will decrease the amount of incoming solar radiation.</li> </ul>

Question	Answer	Marks	Guidance
(c) (i)	<p>Study <b>Fig. 1</b>, which shows carbon dioxide emissions in 2013 (metric tons per capita) for a number of countries, and one stage of the standard deviation calculation.</p> <p><b>Using the data from Fig 1 and the formula provided, calculate the standard deviation value. You must show your working. Give your answer correct to 1 decimal place.</b></p> <p><i>Standard Deviation Formula</i></p> $\sigma = \sqrt{\frac{\sum(x - \bar{x})^2}{n}}$ <ul style="list-style-type: none"> <li>• <math>\sum(x - \bar{x})^2 = 375.785</math></li> <li>• <math>\sum(x - \bar{x})^2/n = 37.5785</math></li> <li>• Standard deviation to 1 d.p. = 6.1</li> </ul>	4	<p><b>AO3 – 4 marks</b></p> <ul style="list-style-type: none"> <li>• <math>\sum(x - \bar{x})^2</math> - 1 mark (✓)</li> <li>• <math>\sum(x - \bar{x})^2/n</math> - 1 mark (✓)</li> <li>• Standard deviation to 1 d.p. - 1 mark (✓)</li> <li>• Showing working - 1 mark (✓)</li> </ul> <ul style="list-style-type: none"> <li>• Allow max 2 marks for error carried forward if subsequent calculations are formulaically correct.</li> </ul>
	<p>(ii) <b>Using evidence from Fig 1, analyse reasons for differences in carbon dioxide emissions between countries.</b></p> <p><b>Level 3 (5-6 marks)</b>            Demonstrates <b>thorough</b> application of knowledge and understanding to provide clear and developed analysis that shows accuracy as to reasons for differences in carbon dioxide emissions between countries (AO2).</p> <p>Demonstrates <b>thorough</b> investigation and interpretation of the quantitative data resource to fully evidence differences in carbon dioxide emissions. There must be strong ideas linking resource evidence to the possible reasons for differences in carbon dioxide emissions (AO3).</p>	6	<p><b>AO2 – 3 marks</b>            Application of knowledge and understanding to analyse reasons for differences in carbon dioxide emissions between countries could potentially include:</p> <ul style="list-style-type: none"> <li>• ACs tend to use more fossil fuels therefore produce more CO<sub>2</sub>.</li> <li>• Demand for energy is greater in ACs /EDCs.</li> <li>• Some countries have greater fossil fuel deposits so are able to use more fossil fuels</li> <li>• Some countries are applying strong regulations and have started to move to renewables</li> <li>• Some countries have a greater energy demand due to their climate eg for heating or air conditioning</li> <li>• Countries with large geographical areas will require longer journeys using more fossil fuels and therefore create more CO<sub>2</sub> emissions from travelling vast distances.</li> </ul>

Question	Answer	Marks	Guidance
	<p><b>Level 2 (3-4 marks)</b> Demonstrates <b>reasonable</b> application of knowledge and understanding to provide clear and developed analysis that shows accuracy as to reasons for differences in carbon dioxide emissions between countries (AO2).</p> <p>Demonstrates <b>reasonable</b> investigation and interpretation of the quantitative data resource to fully evidence differences in carbon dioxide emissions. There must be good ideas linking resource evidence to the possible reasons for differences in carbon dioxide emissions (AO3).</p> <p><b>Level 1 (1-2 marks)</b> Demonstrates <b>basic</b> application of knowledge and understanding to provide clear and developed analysis that shows accuracy as to reasons for differences in carbon dioxide emissions between countries (AO2).</p> <p>Demonstrates <b>basic</b> investigation and interpretation of the quantitative data resource to fully evidence differences in carbon dioxide emissions. There must be some ideas linking resource evidence to resource evidence to the possible reasons for differences in carbon dioxide emissions (AO3).</p> <p><b>0 marks</b> No response worthy of credit.</p>		<ul style="list-style-type: none"> <li>• Countries not signing up to international agreements.</li> </ul> <p><b>AO3 – 3 marks</b> Evidence from investigation and interpretation of the data could potentially include:</p> <ul style="list-style-type: none"> <li>• 3 countries (Russia, USA and Saudi Arabia) stand out with high or fairly high CO<sub>2</sub> emissions i.e. over 12 metric tons per capita - there may be different reasons including being ACs rather than EDCs/LIDCs)</li> <li>• 3 countries (Sudan, Zimbabwe and Vietnam) have emissions of less than 2 metric tons per capita of CO<sub>2</sub> and in this case they are all EDCs</li> <li>• 4 countries have emissions between 2.5 and 7.1 (Brazil, Argentina, Italy and UK). This group includes EDCs and ACs, so the reasons may range from awareness of/action to reduce climate change to limited demand until the economy grows further.</li> <li>• Candidates may also offer country-specific knowledge to support answers such as: <ul style="list-style-type: none"> <li>- United States is high because of its climate leading to increased demand on air conditioning and heating, and its geographical size, resulting in lots of domestic air travel.</li> <li>- Brazil is low because it has invested heavily in renewable HEP which does not produce carbon, so emissions are less.</li> </ul> </li> </ul>

Question	Answer	Marks	Guidance
(d)	<p><b>‘The media is as influential in the climate change debate as scientific evidence.’ How far do you agree with this statement?</b></p> <p><b>Level 4 (10–12 marks)</b> Demonstrates <b>comprehensive</b> and accurate knowledge and understanding of the different agendas shaping the climate change debate (AO1).</p> <p>Demonstrates <b>comprehensive</b> application of knowledge and understanding to provide a detailed and convincing evaluation offering secure judgements leading to rational conclusions that are evidence based as to the extent to which the media is as influential in the climate change debate as scientific evidence (AO2).</p> <p><b>Level 3 (7-9 marks)</b> Demonstrates <b>thorough</b> and mainly accurate knowledge and understanding of the different agendas shaping the climate change debate (AO1).</p> <p>Demonstrates <b>thorough</b> application of knowledge and understanding to provide a detailed evaluation offering generally secure judgements with some link between rational conclusions and evidence as to the extent to which the media is as influential in the climate change debate as scientific evidence (AO2).</p> <p><b>Level 2 (4-6 marks)</b> Demonstrates <b>reasonable</b> and some accurate knowledge and understanding of the different agendas shaping the climate change debate (AO1).</p>	12	<p><b>AO1 – 6 marks</b> Knowledge and understanding of the media and the climate change debate could potentially include:</p> <ul style="list-style-type: none"> <li>• Most scientists agree in human-caused climate change yet the issue remains hugely controversial.</li> <li>• The International Panel on Climate Change is the most authoritative scientific body involved in climate change research.</li> <li>• The climate change debate involves access to information</li> <li>• Sources of information include the media, scientific and subject specific publications and the internet.</li> <li>• Different elements of the media are aimed at specific groups of people.</li> <li>• The media is not always strictly accurate and does not have the requirement to be as stringently evidence-based as scientists do.</li> <li>• Evidence based on science aims to be accurate</li> <li>• There are different agendas linked to: <ul style="list-style-type: none"> <li>○ Historical background including periods of greenhouse and icehouse earth</li> <li>○ The part played by humans in the greenhouse effect compared with the part played by natural factors</li> <li>○ The part the stakeholders play on the global stage and their access to resources which may contribute to climate change and their stage of development (e.g. China not signing the Kyoto Protocol, or the USA leaving the Paris Accord).</li> </ul> </li> </ul> <p><b>AO2 – 6 marks</b> Application of knowledge and understanding to analyse and evaluate the extent to which the media is as important in</p>

Question	Answer	Marks	Guidance
	<p>Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a sound evaluation offering generalised judgements and conclusions with limited links to evidence as to the extent to which media is as influential in the climate change debate as scientific evidence (AO2).</p> <p><b>Level 1 (1-3 marks)</b>            Demonstrates <b>basic</b> and/or inaccurate knowledge and understanding of the different agendas shaping the climate change debate (AO1).</p> <p>Demonstrates <b>basic</b> application of knowledge and understanding offering either unsupported or minimal if any evaluation. Judgements and conclusions, if any, are simplistic regarding the extent to which the media is as influential in the climate change debate as scientific evidence (AO2).</p> <p><b>0 marks</b>            No response worthy of credit.</p>		<p>the climate change debate as evidence based on science could potentially include:</p> <ul style="list-style-type: none"> <li>• Science journals and subject-specific publications are required to be based on data collection and evaluation (and to be peer-reviewed) whereas newspapers are not and therefore more likely to be based on objective ‘truth’ rather than any bias of the newspaper or media outlet.</li> <li>• Energy companies (Shell, BP, ExxonMobil etc) are likely to want to distance climate change from human causes and have the means to do so, such as by purchasing advertising or influencing politicians.</li> <li>• The wider reach of media versus scientific journals means that more people are going to come into contact with their information rather than from scientists.</li> <li>• The media will have a wider influence than scientists</li> <li>• Media outlets have biases which may influence their coverage (Guardian is left-leaning whereas The Times is more right of centre)</li> <li>• Media simplifies facts for a wider audience</li> <li>• The general public are unlikely to read scientific papers so any content they access will be from media outlets</li> <li>• Some media, in an attempt to be seen as unbiased, give as much attention to the very small number of climate change ‘deniers’ as the overwhelming weight of evidence pointing to human causes.</li> <li>• Social Media, such as Twitter, can give an un-edited platform for people to share their opinions as fact.</li> <li>• Social Media more widely available.</li> <li>• Technological developments have allowed media and other organisations the ability to produce detailed computer models about climate changes.</li> </ul>

Question		Answer	Marks	Guidance
2	(a)	<p><b>Explain two ways physical barriers negatively affect disease mitigation.</b></p> <ul style="list-style-type: none"> <li>Physical barriers such as mountain ranges or rivers (✓) can create remoteness from large centres of population (✓) which can make access difficult (✓) e.g. to bring assistance and aid in dealing with disease. (✓)</li> <li>Remoteness and lack of contact with the outside world (✓) can reduce a person's knowledge of available disease mitigations (✓) and their ability to fight off diseases (✓) such as measles and chickenpox (✓) because people have not been able to build up an immunity over time (✓).</li> <li>Natural hazards, such as earthquakes (✓) can disrupt water supplies and increase the spread of water-borne diseases such as cholera (✓). Excess water, such as from a flood or storm (✓), can help spread diseases and make them harder to contain (✓).</li> </ul>	4	<p><b>AO1 – 4 marks</b></p> <p>2 x 2 mark (✓) for each correct explanatory point. Focus should be on the knowledge and understanding of the relationship between physical barriers and disease mitigation.</p>
	(b)	<p><b>Suggest how rising standards of living influence a country's epidemiological transition.</b></p> <p><b>Level 3 (5-6 marks)</b> Demonstrates <b>thorough</b> knowledge and understanding of the epidemiological transition (AO1).</p> <p><b>Place specific details</b> should be <b>accurate</b> with the amount helping determine where within the Level the response lies.</p> <p>Demonstrates <b>thorough</b> application of knowledge and understanding to provide an <b>accurate, clear</b> and <b>developed</b> analysis as to how rising standards of living influence a country's epidemiological transition (AO2).</p>	6	<p><b>AO1 – 3 marks</b></p> <p>Knowledge and understanding of the process of epidemiological transition could potentially include:</p> <ul style="list-style-type: none"> <li>There is a relationship between a country's demographics, stage of development and epidemiological factors.</li> <li>Four stages are suggested: The age of pestilence and famine; The age of receding pandemics, Post-industrial societies - the age of degenerative and manmade diseases and the age of delayed degenerative diseases.</li> </ul>

Question	Answer	Marks	Guidance
	<p><b>Level 2 (3-4 marks)</b> Demonstrates <b>reasonable</b> knowledge and understanding of the epidemiological transition (AO1).</p> <p><b>Place specific</b> material is present which is <b>partially accurate</b> with the amount helping determine where within the Level the response lies.</p> <p>Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a <b>sound</b> analysis showing some accuracy and development as to how rising standards of living influence a country's epidemiological transition (AO2).</p> <p><b>Level 1 (1-2 marks)</b> Demonstrates <b>basic</b> knowledge and understanding of the epidemiological transition (AO1).</p> <p>Little or no <b>place specific</b> material is present and or is inaccurate.</p> <p>Demonstrates <b>basic</b> application of knowledge and understanding to provide a <b>simple analysis</b> showing limited accuracy and little development as to how rising standards of living influence a country's epidemiological transition (AO2).</p> <p><b>0 marks</b> No response worthy of credit.</p>		<ul style="list-style-type: none"> <li>• The rate of communicable diseases tends to fall whilst the rate of non-communicable diseases increases with development.</li> <li>• Rising standards of living can be measured in many ways, such as an increase in GNI per capita; persons per doctor; calorie intake per person</li> </ul> <p><b>AO2 – 3 marks</b></p> <p>Application of knowledge and understanding to analyse how rising standards of living influence a country's epidemiological transition could potentially include:</p> <ul style="list-style-type: none"> <li>• Rising standard of living sees an increase in clean water supplies which are less likely to spread communicable diseases</li> <li>• Rising standard of living sees increased government income to provide health care such as immunisation programmes</li> <li>• Higher standards of living are linked to: <ul style="list-style-type: none"> <li>- a shift in the employment structure; people working in industry are more likely to be affected by related issues (asbestos / exposure to harmful chemicals)</li> <li>- Longer life expectancy so non-communicable such as cancer and degenerative diseases are more prevalent as causes of death.</li> <li>- Greater access to food, so starvation and malnutrition reduce as diabetes and obesity become more frequent</li> <li>- More personal transport (e.g. cars/motorbikes that emit dangerous gases in their exhaust) so air-pollution-linked conditions (respiratory diseases) are more common.</li> </ul> </li> </ul>

Question	Answer	Marks	Guidance
(c) (i)	<p>Study Fig. 2, which shows neonatal mortality rates per 1000 live births in 2013 for a number of countries, and one stage of the standard deviation calculation.</p> <p><b>Using the data from Fig 2 and the formula provided, calculate the standard deviation value. You must show your working. Give your answer correct to 1 decimal place.</b></p> <p><i>Standard Deviation Formula</i></p> $\sigma = \sqrt{\frac{\sum(x - \bar{x})^2}{n}}$ <ul style="list-style-type: none"> <li>• <math>\sum(x - \bar{x})^2 = 2244.2760</math></li> <li>• <math>\sum(x - \bar{x})^2/n = 224.4276</math></li> <li>• Standard deviation to 1 d.p. = 15.0</li> </ul>	4	<p><b>AO3 – 4 marks</b></p> <ul style="list-style-type: none"> <li><input type="checkbox"/> <math>\sum(x - \bar{x})^2</math> - 1 mark (✓)</li> <li><input type="checkbox"/> <math>\sum(x - \bar{x})^2/n</math> - 1 mark (✓)</li> <li><input type="checkbox"/> Standard deviation to 1 d.p. - 1 mark (✓)</li> <li><input type="checkbox"/> Showing working - 1 mark (✓)</li> <li><input type="checkbox"/> Allow max 2 marks for error carried forward if subsequent calculations are formulaically correct.</li> </ul>
	<p>(ii) <b>Using evidence from Fig 2, analyse reasons for differences in neonatal mortality rates between countries.</b></p> <p><b>Level 3 (5-6 marks)</b>          Demonstrates <b>thorough</b> application of knowledge and understanding to provide clear and developed analysis that shows accuracy as to reasons for differences in neonatal mortality rates between countries. Reference to neonatal mortality rates is explicit (AO2).</p> <p>Demonstrates <b>thorough</b> investigation and interpretation of the quantitative data resource to fully evidence differences in neonatal mortality rates. There must be strong ideas linking resource evidence to the possible reasons for differences in neonatal mortality rates (AO3).</p>	6 AO2x3 AO3x3	<p><b>AO2 – 3 marks</b></p> <p>Application of knowledge and understanding to analyse reasons for differences in neonatal mortality rates between countries could potentially include:</p> <ul style="list-style-type: none"> <li>• Deaths of babies in the first 28 days of life may reflect overall standards of health care. Neonatal made explicit.</li> <li>• Risk of infection varies between countries for a variety of reasons including:             <ul style="list-style-type: none"> <li>○ Sanitation</li> <li>○ Water supply</li> <li>○ Food as it can impact the health of the mother</li> </ul> </li> </ul>

Question	Answer	Marks	Guidance
	<p><b>Level 2 (3-4 marks)</b> Demonstrates <b>reasonable</b> application of knowledge and understanding to provide clear and developed analysis that shows accuracy as to reasons for differences in neonatal mortality rates between countries (AO2).</p> <p>Demonstrates <b>reasonable</b> investigation and interpretation of the quantitative data resource to fully evidence differences in neonatal mortality rates. There must be good ideas linking resource evidence to the possible reason for differences in neonatal mortality rates (AO3).</p> <p><b>Level 1 (1-2 marks)</b> Demonstrates <b>basic</b> application of knowledge and understanding to provide clear and developed analysis that shows accuracy as to reason for differences in neonatal mortality rates between countries (AO2).</p> <p>Demonstrates <b>basic</b> investigation and interpretation of the quantitative data resource to fully evidence differences in neonatal mortality rates. There must be some ideas linking resource evidence to resource evidence to the possible reasons for differences in neonatal mortality rates (AO3).</p> <p><b>0 marks</b> No response worthy of credit.</p>		<ul style="list-style-type: none"> <li>• Education/status in society of mothers affects their attitude to pregnancy and birth, and their awareness of ways to reduce risk.</li> <li>• Standard of medical care available to mothers and babies depends on a variety of factors including ability of families to access the services that are available depending on: <ul style="list-style-type: none"> <li>○ Distance from facilities</li> <li>○ Possible temporary barriers e.g. natural disasters</li> <li>○ Urban or rural – usually urban residents can access services more easily</li> </ul> </li> </ul> <p><b>AO3 – 3 marks</b> Evidence from investigation and interpretation of the data could potentially include:</p> <ul style="list-style-type: none"> <li>• 3 countries have neonatal mortality rates under 6, (Chile, UK and USA) – ACs / EDCs with ability to provide appropriate medical services.</li> <li>• 5 countries have neonatal mortality rates over 28 but under 40 (Afghanistan, Democratic Republic of Congo, India, Mozambique, Sudan). As LIDCs it is difficult to afford the healthcare of richer nations.</li> <li>• The highest neonatal mortality rate is 47.4, Pakistan, another LIDC.</li> </ul>

Question	Answer	Marks	Guidance
(d)	<p><b>‘Disease vectors are influenced more by physical factors than by human factors.’ How far do you agree with this statement?</b></p> <p><b>Level 4 (10–12 marks)</b> Demonstrates <b>comprehensive</b> and accurate knowledge and understanding of how disease vectors are influenced by physical and human factors. (AO1).</p> <p>Demonstrates <b>comprehensive</b> application of knowledge and understanding to provide a detailed and convincing evaluation offering secure judgements leading to rational conclusions that are evidence based as to the extent to which disease vectors are influenced more by physical than human factors (AO2).</p> <p><b>Level 3 (7-9 marks)</b> Demonstrates <b>thorough</b> and mainly accurate knowledge and understanding of how disease vectors are influenced by physical and human factors. (AO1).</p> <p>Demonstrates <b>thorough</b> application of knowledge and understanding to provide a detailed evaluation offering generally secure judgements with some link between rational conclusions and evidence as to the extent to which disease vectors are influenced more by physical than human factors (AO2).</p> <p><b>Level 2 (4-6 marks)</b> Demonstrates <b>reasonable</b> and some accurate knowledge and understanding of how disease vectors are influenced by physical and human factors. (AO1).</p> <p>Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a sound evaluation offering generalised judgements and conclusions with limited links to evidence as to the extent to which disease vectors are influenced more by physical than human factors (AO2).</p>	12	<p><b>AO1 – 6 marks</b> Knowledge and understanding of how disease vectors are influenced by physical and human factors could potentially include:</p> <ul style="list-style-type: none"> <li>• A vector is a carrier e.g. mosquitoes, that transmits an infectious disease such as malaria</li> <li>• Climate allows mosquitoes which carry diseases such as Dengue to thrive in certain areas.</li> <li>• Many disease vectors are more prevalent in tropical / sub-tropical rainy seasons</li> <li>• Certain types of physical landscape support vector-borne diseases like Malaria including low-lying coastal or river-side areas; highlands and mountains tend to act as barriers.</li> <li>• Human vaccination can prevent the spread of these diseases.</li> <li>• Human settlement and concentration of population can increase the number of people who are infected.</li> <li>• Human actions can increase or decrease the effectiveness of a physical vector, through factors like healthcare, access to clean water, education and sanitation.</li> </ul> <p><b>AO2 – 6 marks</b> Application of knowledge and understanding to analyse and evaluate the extent to which disease vectors are influenced more by physical than human factors could potentially include:</p> <ul style="list-style-type: none"> <li>• Globalisation and increase in travel means that people are more able to carry and spread diseases (Zika virus / Swine Flu) meaning that physical conditions are less important.</li> </ul>

Question	Answer	Marks	Guidance
	<p><b>Level 1 (1-3 marks)</b> Demonstrates <b>basic</b> and/or inaccurate knowledge and understanding of how disease vectors are influenced by physical and human factors. (AO1).</p> <p>Demonstrates <b>basic</b> application of knowledge and understanding offering either unsupported or minimal if any evaluation. Judgements and conclusions, if any, are simplistic regarding the extent to which disease vectors are influenced more by physical than human factors (AO2).</p> <p><b>0 marks</b> No response worthy of credit.</p>		<ul style="list-style-type: none"> <li>• Natural disasters can foster the outbreak and spread of disease by disrupting clean water supplies, creating habitats for insects to breed such as stagnant water. This can destroy human-made barriers to disease and increase the coverage.</li> <li>• As population density increases, disease will spread more easily, demonstrating that human actions cause the spread.</li> <li>• Vaccination is more effective at stopping disease than physical barriers.</li> <li>• War / conflict influencing the prevalence of disease vectors e.g. broken water / sewage pipes leads to stagnant pools of water.</li> <li>• Human-caused climate change creates conditions which will impact the ability of insects to carry disease faster than natural climate change: <ul style="list-style-type: none"> <li>- Warmer winters will reduce the prevalence of influenza strains, given that it is most efficient at lower temperatures</li> <li>- Warmer and wetter conditions will increase the spread of diseases such as West Nile Virus, Lyme's disease, and malaria because the insects carrying them will have preferable conditions for longer over a wider geographical area.</li> </ul> </li> </ul>

Question		Answer	Marks	Guidance
3	(a)	<p><b>Explain two ways ocean ecosystems are influenced by changes in temperature.</b></p> <ul style="list-style-type: none"> <li>Higher temperatures lead to melting ice so rising sea level (✓) which leads to coastal squeeze (✓), loss of salt marsh (✓) and coral reefs become too deep so less light penetration (✓)</li> <li>Higher temperatures can lead to coral bleaching (✓) leading to increased stress on the algae (✓), expulsion of algae from the coral (✓) and subsequent loss of colour (✓)</li> <li>Temperature changes are usually linked to energy from sunlight (✓) so increase in temperature will see an increase in light in the photic zone (✓) therefore more plant-life. (✓)</li> <li>Temperatures are low, or fall - cold water stores more oxygen than warm water (✓) so a drop in temperature will see an increase in the amount of oxygen (✓) which is required for plants and animals to survive. E.g. the Antarctic Ocean ecosystem is richer in the winter as a result. (✓)</li> </ul>	4	<p><b>AO1 – 4 marks</b> 2 x 2 marks (✓) for each correct explanatory point.</p> <p>Focus should be on the knowledge and understanding of the way ocean ecosystems are influenced by changes in temperature.</p>
	(b)	<p><b>Suggest how pollution can impact marine organisms.</b></p> <p><b>Level 3 (5-6 marks)</b> Demonstrates <b>thorough</b> knowledge and understanding of pollution that can impact on marine organisms (AO1).</p> <p><b>Place specific details</b> should be <b>accurate</b> with the amount helping determine where within the Level the response lies.</p>	6	<p><b>AO1 – 3 marks</b> Knowledge and understanding of the types of pollution that can impact on marine organisms could potentially include:</p> <ul style="list-style-type: none"> <li>Pollution from fossil fuels burnt at sea by cruise ships and container ships, or from land-based sources creates vast amounts of CO<sub>2</sub>, SO<sub>2</sub> and NO<sub>2</sub></li> <li>Marine debris, including plastics, is accidentally and deliberately dumped at sea</li> <li>Nitrates and phosphates from agriculture can be washed off fields by heavy rain into the oceans</li> </ul>

Question	Answer	Marks	Guidance
	<p>Demonstrates <b>thorough</b> application of knowledge and understanding to provide an <b>accurate, clear</b> and <b>developed analysis</b> as to how pollution can impact on marine organisms (AO2).</p> <p><b>Level 2 (3-4 marks)</b> Demonstrates <b>reasonable</b> knowledge and understanding of pollution that can impact on marine organisms (AO1).</p> <p><b>Place specific</b> material is present which is <b>partially accurate</b> with the amount helping determine where within the Level the response lies.</p> <p>Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a <b>sound analysis</b> showing some accuracy and development as to how pollution can impact on marine organisms (AO2).</p> <p><b>Level 1 (1-2 marks)</b> Demonstrates <b>basic</b> knowledge and understanding of pollution that can impact on marine organisms (AO1).</p> <p>Little or no <b>place specific</b> material is present and or is inaccurate.</p> <p>Demonstrates <b>basic</b> application of knowledge and understanding to provide a <b>simple analysis</b> showing limited accuracy and little development as to how pollution can impact on marine organisms (AO2).</p> <p><b>0 marks</b> No response worthy of credit.</p>		<ul style="list-style-type: none"> <li>• Sewage can be pumped out to sea instead of being treated on land.</li> <li>• Industrial processes can produce effluent which is washed out to sea</li> <li>• Proximity to nuclear power plants can create radioactive pollutants (especially after a disaster such as in Fukushima)</li> <li>• Oil spills (such as Deepwater Horizon)</li> </ul> <p><b>AO2 – 3 marks</b> Application of knowledge and understanding to analyse how pollution can impact on marine organisms could potentially include;</p> <ul style="list-style-type: none"> <li>• CO<sub>2</sub>, SO<sub>2</sub> and NO<sub>2</sub> can be dissolved in water and turn the ocean acidic, which affects the ability of plants and animals to survive, such as the impact on ability of organisms to form shells made from calcium carbonate.</li> <li>• Impact on foodchains and webs as a result of loss of lower trophic levels.</li> <li>• Debris can be eaten by birds and animals which kills them, affecting the food chain higher up.</li> <li>• Animals can be caught in debris/pollutants (e.g. turtles in plastic 4-can ring holders, sea birds in oil spills) which restricts their growth.</li> <li>• Nitrates and phosphates can cause eutrophication in coastal waters where the resulting algal bloom blocks out light and prevents photosynthesis, leading to deoxygenation and breakdown of ecosystem.</li> <li>• Nuclear pollution can cause mutation of cells which is passed on through the food chain.</li> </ul>

Question	Answer	Marks	Guidance
(c) i	<p>Study <b>Fig 3</b>, which shows the amount of cargo imported via oceans (in millions TEUs) in 2014 for a number of countries, and one stage of the standard deviation calculation.</p> <p>Using the data from Fig 3 and the formula provided, calculate the standard deviation value. You must show your working. Give your answer correct to 1 decimal place.</p> <p><i>Standard Deviation Formula</i></p> $\sigma = \sqrt{\frac{\sum(x - \bar{x})^2}{n}}$ <ul style="list-style-type: none"> <li>• <math>\sum(x - \bar{x})^2 = 327.196</math></li> <li>• <math>\sum(x - \bar{x})^2/n = 32.7196</math></li> <li>• Standard deviation to 1 d.p. = 5.7</li> </ul>	4	<p><b>AO3 – 4 marks</b></p> <ul style="list-style-type: none"> <li>• <math>\sum(x - \bar{x})^2</math> - 1 mark (✓)</li> <li>• <math>\sum(x - \bar{x})^2/n</math> - 1 mark (✓)</li> <li>• Standard deviation to 1 d.p. - 1 mark (✓)</li> <li>• Showing working - 1 mark (✓)</li> </ul> <p>Allow max 2 marks for error carried forward if subsequent calculations are formulaically correct.</p>
	<p><b>ii</b> <b>Using evidence from Fig 3, analyse reasons for differences in the amount of cargo imported via oceans between countries</b></p> <p><b>Level 3 (5-6 marks)</b>          Demonstrates <b>thorough</b> application of knowledge and understanding to provide clear and developed analysis that shows accuracy as to reasons for differences in the amount of cargo imported via oceans between countries (AO2).</p> <p>Demonstrates <b>thorough</b> investigation and interpretation of the quantitative data resource to fully evidence differences in the amount of cargo imported via oceans. There must be strong ideas linking resource evidence to the possible reasons for differences in the amount of cargo imported via oceans (AO3).</p>	6	<p><b>AO2 – 3 marks</b></p> <p>Application of knowledge and understanding to analyse reasons for differences in the amount of cargo imported via oceans between countries could potentially include:</p> <ul style="list-style-type: none"> <li>• Countries have a different import/export balance</li> <li>• Not all countries have a coastline and are therefore unable to import via oceans</li> <li>• Not all countries have access to trade routes and are therefore unable to import via oceans</li> <li>• Some countries may import more goods as a hub to transport to land-locked countries</li> <li>• Ocean-cargo is mainly suitable for bulky non-perishable goods due to the time it takes to transport – countries requiring fresh or high-value goods might import via airfreight instead.</li> </ul>

Question	Answer	Marks	Guidance
	<p><b>Level 2 (3-4 marks)</b> Demonstrates <b>reasonable</b> application of knowledge and understanding to provide clear and developed analysis that shows accuracy as to reasons for differences in the amount of cargo imported via oceans between countries (AO2).</p> <p>Demonstrates <b>reasonable</b> investigation and interpretation of the quantitative data resource to fully evidence differences in the amount of cargo imported via oceans There must be good ideas linking resource evidence to the possible reasons for differences in the amount of cargo imported via oceans (AO3).</p> <p><b>Level 1 (1-2 marks)</b> Demonstrates <b>basic</b> application of knowledge and understanding to provide clear and developed analysis that shows accuracy as to reasons for differences in the amount of cargo imported via oceans between countries (AO2).</p> <p>Demonstrates <b>basic</b> investigation and interpretation of the quantitative data resource to fully evidence differences in the amount of cargo imported via oceans There must be some ideas linking resource evidence to resource evidence to the possible reasons for differences in the amount of cargo imported via oceans (AO3).</p> <p><b>0 marks</b> No response worthy of credit.</p>		<ul style="list-style-type: none"> <li>• Containerization has made ocean transport more flexible / easier / more specialized e.g. for manufactured goods / refrigerated food stuffs.</li> <li>• Countries with a large population may import more goods to service the population.</li> </ul> <p><b>AO3 – 3 marks</b> Evidence from investigation and interpretation of the data could potentially include:</p> <ul style="list-style-type: none"> <li>• China and the US have the largest imports – they have large populations. Whilst it does not specify what they imports are, China imports lots of raw materials which it then processes and exports to countries such as the US, which is more likely to import goods rather than materials.</li> <li>• Japan has a high number of imports – given that it is an island nation, it required resources from abroad as it cannot be self-sufficient.</li> <li>• Whilst India a very large population, it has the lowest imports on the table; this could be due to the lower GDP and hence the inability of people to afford expensive imported goods.</li> </ul>

(d)	<p><b>‘Treating the oceans as ‘global commons’ has been detrimental to them.’ How far do you agree with this statement?</b></p> <p><b>Level 4 (10–12 marks)</b> Demonstrates <b>comprehensive</b> and accurate knowledge and understanding of oceans as ‘global commons’ (AO1).</p> <p>Demonstrates <b>comprehensive</b> application of knowledge and understanding to provide a detailed and convincing evaluation offering secure judgements leading to rational conclusions that are evidence based as to whether treating the oceans as ‘global commons’ has been detrimental to them (AO2).</p> <p><b>Level 3 (7-9 marks)</b> Demonstrates <b>thorough</b> and mainly accurate knowledge and understanding of ‘global commons’ (AO1).</p> <p>Demonstrates <b>thorough</b> application of knowledge and understanding to provide a detailed evaluation offering generally secure judgements with some link between rational conclusions and evidence as to whether treating the oceans as ‘global commons’ has been detrimental to them (AO2).</p> <p><b>Level 2 (4-6 marks)</b> Demonstrates <b>reasonable</b> and some accurate knowledge and understanding of ‘global commons’ (AO1).</p> <p>Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a sound evaluation offering generalised judgements and conclusions with limited links to evidence as to whether treating the oceans as ‘global commons’ has been detrimental to them (AO2).</p>	12	<p><b>AO1 – 6 marks</b> Knowledge and understanding of the oceans as ‘global commons’ could potentially include:</p> <ul style="list-style-type: none"> <li>• Global Commons are the Earth’s shared natural resources, e.g. the oceans and the atmosphere.</li> <li>• The tragedy of the commons is a metaphor illustrating how individuals can overexploit a resource in common ownership (e.g. fish in the deep ocean), leading to its depletion or degradation.</li> <li>• United Nations Convention on the Law of the Sea (UNCLOS) provides a framework for governance of the oceans. <ul style="list-style-type: none"> <li>○ Distance from the coastline of a country determines the ‘ownership’</li> <li>- 0-3 nautical miles is territorial waters</li> <li>- 3-24 nautical miles a country has sovereignty although others can travel through</li> <li>- 24-200 nautical miles a country has the rights to the contents of the water and seabed</li> <li>- 200+ nautical miles from shore is not under sovereign rule.</li> </ul> </li> <li>• Some agreements (UNCLOS) are widely adhered to, but others such as the International Whaling Commission has less than half of the world’s countries signed up, meaning that some countries (Japan) do not recognise the IWC’s authority.</li> </ul> <p><b>AO2 – 6 marks</b> Application of knowledge and understanding to analyse and evaluate the extent to which treating the oceans as ‘global commons’ has been detrimental to them could potentially include:</p>

	Answer	Marks	Guidance
	<p><b>Level 1 (1-3 marks)</b> Demonstrates <b>basic</b> and/or inaccurate knowledge and understanding of 'global commons' (AO1).</p> <p>Demonstrates <b>basic</b> application of knowledge and understanding offering either unsupported or minimal if any evaluation. Judgements and conclusions, if any, are simplistic regarding whether treating the oceans as 'global commons' has been detrimental to them (AO2).</p> <p><b>0 marks</b> No response worthy of credit.</p>		<ul style="list-style-type: none"> <li>• Allowing countries to have rights over parts of the ocean means that they can be controlled and protected. The UK designated the Chagos Marine Reserve (in its British Indian Ocean Territory) as a No Take Zone (NTZ) and as a result has been able to protect the environment and have some of the cleanest seas in the world.</li> <li>• Oceans designated as global commons means that no one country is in charge, sharing the responsibility of the oceans so <ul style="list-style-type: none"> <li>○ cannot impose restrictions. All have to agree to certain conditions (eg for a NTZ to be created) which works as long as the shared interest always outweighs the individuals.</li> <li>○ Individuals [people or nations] therefore can act selfishly as they will benefit in the short-term with the detriment being shared across everyone.</li> <li>○ Degradation of this shared resource is called a 'tragedy of the commons'.</li> <li>○ Makes policing of offenders difficult.</li> </ul> </li> <li>• Voluntary codes of conduct mean that if a country does not sign up to them, the others are powerless to do anything (as in the IWC)</li> <li>• The oceans are interconnected so the impact of an action, such as plastic pollution, can be concentrated in far-away places. Garbage gyres in the Pacific collect debris which impacts on the marine ecosystems, but as they are more than 200 nautical miles from the coast, they are no country's responsibility hence they have not been cleaned up.</li> </ul>

Question		Answer	Marks	Guidance
4	(a)	<p><b>Explain two ways globalisation of the food industry has created opportunities.</b></p> <ul style="list-style-type: none"> <li>• Greater scrutiny of food in the media (✓) means that people all over the world can be informed (✓), pick up on trends in food. (✓)</li> <li>• The distribution network is interlinked (✓) so people can eat (fresh) food grown elsewhere (✓) get food out of season (✓)</li> <li>• People with specific skills in cooking can travel (✓) like Tandoori chefs (✓) being able to work in the UK. (✓)</li> <li>• Technology has been able to assist in genetically modifying crops (✓) so they can be grown in marginal areas (✓) that was not possible before (✓).</li> </ul>	4	<p><b>AO1 – 4 marks</b></p> <p>2 x 2 marks (✓) for explanation of each correct way. Focus should be on the knowledge and understanding of each of the ways opportunities have been created by the globalisation of the food industry.</p> <p>There are lots of possibilities for this answer, so be prepared to credit any two reasonable responses.</p>
	(b)	<p><b>Suggest why the pattern of food security within a country is dynamic.</b></p> <p><b>Level 3 (5-6 marks)</b> Demonstrates <b>thorough</b> knowledge and understanding of the pattern of food security within a county (AO1).</p> <p><b>Place specific details</b> should be <b>accurate</b> with the amount helping determine where within the Level the response lies.</p> <p>Demonstrates <b>thorough</b> application of knowledge and understanding to provide an <b>accurate, clear</b> and <b>developed analysis</b> as to why the pattern of food security within a country is dynamic (AO2).</p>	6	<p><b>AO1 – 3 marks</b></p> <p>Knowledge and understanding of the pattern of food security within a country could potentially include:</p> <ul style="list-style-type: none"> <li>• Food security is defined by the World Food Programme (WFP) as having three pillars; availability, access and utilisation.</li> <li>• Pattern can be temporal (seasonal) or spatial (varying over a geographical area)</li> <li>• Pattern can exist within a country (urban vs rural / East vs West China)</li> <li>• African countries are in the region with the lowest Global Food Security Index.</li> <li>• The trend is for the higher the GDP the greater the food security</li> <li>• The changes in patterns of food security can be both positive and negative.</li> </ul>

Question	Answer	Marks	Guidance
	<p><b>Level 2 (3-4 marks)</b> Demonstrates <b>reasonable</b> knowledge and understanding of the pattern of food security within a county (AO1).</p> <p><b>Place specific</b> material is present which is <b>partially accurate</b> with the amount helping determine where within the Level the response lies.</p> <p>Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a <b>sound analysis</b> showing some accuracy and development as to why the pattern of food security within a country is dynamic (AO2).</p> <p><b>Level 1 (1-2 marks)</b> Demonstrates <b>basic</b> knowledge and understanding of the pattern of food security within a county (AO1).</p> <p>Little or no <b>place specific</b> material is present and or is inaccurate.</p> <p>Demonstrates <b>basic</b> application of knowledge and understanding to provide a <b>simple analysis</b> showing limited accuracy and little development as to why the pattern of food security within a country is dynamic (AO2).</p> <p><b>0 marks</b> No response or no material worthy of credit.</p>		<p><b>AO2 – 3 marks</b> Application of knowledge and understanding to analyse how the pattern of food security within a country changes could potentially include:</p> <ul style="list-style-type: none"> <li>• Change in climate can make areas once able to produce food unviable or vice versa</li> <li>• Natural disasters / disease can wipe out an entire crop.</li> <li>• Change in political systems can see the alterations in international trade agreements which may affect food security in some parts of a country more than others</li> <li>• Conflict in an area can: <ul style="list-style-type: none"> <li>- Change who has control of the land</li> <li>- Prevent men from working the land as they are called to fight</li> <li>- Make it unsafe to travel to market to trade</li> </ul> </li> </ul>

Question		Answer	Marks	Guidance
c	i	<p>Study <b>Fig. 4</b>, which shows the Global Food Security Index score in 2016 for a number of countries, and one stage of the standard deviation calculation.</p> <p>Using the data from Fig 4 and the formula provided, calculate the standard deviation value. You must show your working. Give your answer correct to 1 decimal place.</p> <p><i>Standard Deviation Formula</i></p> $\sigma = \sqrt{\frac{\sum(x - \bar{x})^2}{n}}$ <ul style="list-style-type: none"> <li>• <math>\sum(x - \bar{x})^2 = 4145.776</math></li> <li>• <math>\sum(x - \bar{x})^2/n = 414.5776</math></li> <li>• Standard deviation to 1 d.p. = 20.4</li> </ul>	4	<p><b>AO3 – 4 marks</b></p> <ul style="list-style-type: none"> <li>• <math>\sum(x - \bar{x})^2</math> - 1 mark (✓)</li> <li>• <math>\sum(x - \bar{x})^2/n</math> - 1 mark (✓)</li> <li>• Standard deviation to 1 d.p. - 1 mark (✓)</li> <li>• Showing working - 1 mark (✓)</li> </ul> <p>Allow max 2 marks for error carried forward if subsequent calculations are formulaically correct.</p>
	ii	<p><b>Using evidence from Fig 4, analyse reasons for differences in the Global Food Security Index score between countries.</b></p> <p><b>Level 3 (5-6 marks)</b> Demonstrates <b>thorough</b> application of knowledge and understanding to provide clear and developed analysis that shows accuracy as to reasons for differences in the Global Food Security Index score between countries. (AO2).</p> <p>Demonstrates <b>thorough</b> investigation and interpretation of the quantitative data resource to fully evidence differences in the Global Food Security Index score. There must be strong ideas linking resource evidence to possible reasons for differences in the Global Food Security Index Score (AO3).</p>	6	<p><b>AO2 – 3 marks</b></p> <p>Application of knowledge and understanding to analyse reasons for differences in the Global Food Security Index Score between countries could potentially include:</p> <ul style="list-style-type: none"> <li>• Global Food Security Index Score is a measure of how secure a country is with regards to food. The higher the score the more able they are to be secure.</li> <li>• GFSI can be affected by the climate, the landscape, the political situation.</li> <li>• Countries with a higher GDP will be in a position to buy supplies to bolster provision in times of need; something not available to poorer countries.</li> </ul>

Question	Answer	Marks	Guidance
	<p><b>Level 2 (3-4 marks)</b> Demonstrates <b>reasonable</b> application of knowledge and understanding to provide clear and developed analysis that shows accuracy as to reasons for differences in the Global Food Security Index score between countries. (AO2).</p> <p>Demonstrates <b>reasonable</b> investigation and interpretation of the quantitative data resource to fully evidence differences in the Global Food Security Index score. There must be good ideas linking resource evidence to possible reasons for differences in the Global Food Security Index score (AO3).</p> <p><b>Level 1 (1-2 marks)</b> Demonstrates <b>basic</b> application of knowledge and understanding to provide clear and developed analysis that shows accuracy as to reasons for differences in the Global Food Security Index score between countries. (AO2).</p> <p>Demonstrates <b>basic</b> investigation and interpretation of the quantitative data resource to fully evidence differences in the Global Food Security Index score. There must be some ideas linking resource evidence to possible reasons for differences in the Global Food Security Index score between countries. (AO3).</p> <p><b>0 marks</b> No response worthy of credit.</p>		<p><b>AO3 – 3 marks</b> Evidence from investigation and interpretation of the data could potentially include:</p> <ul style="list-style-type: none"> <li>• 3 countries (USA, Ireland and UK) have scores of &gt;80 – meaning they are very secure with regards to food; they are ACs so have ability to import and stockpile, but they also have climates suitable for growing crops.</li> <li>• Qatar is just outside this group; whilst it is an AC, it is also very hot and does not have the climatic advantages of the countries higher up.</li> <li>• Haiti is at the bottom of the list as it has been affected by both natural disasters and conflict which reduce its capacity to provide security for food.</li> </ul>

Question	Answer	Marks	Guidance
(d)	<p><b>'Food security is most likely to be affected by human factors.'</b> How far do you agree with this statement?</p> <p><b>Level 4 (10–12 marks)</b> Demonstrates <b>comprehensive</b> and accurate knowledge and understanding of how food security is likely to be affected by human factors (AO1).</p> <p>Demonstrates <b>comprehensive</b> application of knowledge and understanding to provide a detailed and convincing evaluation offering secure judgements leading to rational conclusions that are evidence based as to the extent to which food security is most likely to be affected by human factors (AO2).</p> <p><b>Level 3 (7-9 marks)</b> Demonstrates <b>thorough</b> and mainly accurate knowledge and understanding of how food security is likely to be affected by human factors (AO1).</p> <p>Demonstrates <b>thorough</b> application of knowledge and understanding to provide a detailed evaluation offering generally secure judgements with some link between rational conclusions and evidence as to the extent to which food security is most likely to be affected by human factors (AO2).</p> <p><b>Level 2 (4-6 marks)</b> Demonstrates <b>reasonable</b> and some accurate knowledge and understanding of how food security is likely to be affected by human factors (AO1).</p>	12	<p><b>AO1 – 6 marks</b> Knowledge and understanding of how food security is likely to be affected by human factors could potentially include:</p> <ul style="list-style-type: none"> <li>• Food security is defined by the World Food Programme (WFP) as having three pillars; availability, access and utilisation.</li> </ul> <p>Human:</p> <ul style="list-style-type: none"> <li>• Land ownership – land owners can influence where the crop goes</li> <li>• Capital – investment can provide motivation to increase yields</li> <li>• Competition – price wars can impact farmers</li> <li>• Technology – can increase yields e.g. through genetic modification.</li> <li>• Land grabbing – countries buying up land in other countries to service their needs</li> <li>• Storage and distribution – can benefit food security if effective and the opposite if inadequate</li> <li>• Human causes of desertification – reduce food supply</li> <li>• Trade agreements – can have positive and negative effects on food security</li> <li>• Conflict e.g. civil war – usually leads to reduced food security</li> </ul> <p><b>AO2 – 6 marks</b> Application of knowledge and understanding to analyse and evaluate the extent to which food security is most likely to be affected by human factors could potentially include:</p> <ul style="list-style-type: none"> <li>• Human factors are more dynamic as they can change faster so likely to impact food security quickly whether positive or negative.</li> </ul>

Question	Answer	Marks	Guidance
	<p>Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a sound evaluation offering generalised judgements and conclusions with limited links to evidence as to the extent to which food security is most likely to be affected by human factors (AO2).</p> <p><b>Level 1 (1-3 marks)</b> Demonstrates <b>basic</b> and/or inaccurate knowledge and understanding of how food security is likely to be affected by human factors (AO1).</p> <p>Demonstrates <b>basic</b> application of knowledge and understanding offering either unsupported or minimal if any evaluation. Judgements and conclusions, if any, are simplistic regarding the extent to which food security is most likely to be affected by human factors (AO2).</p> <p><b>0 marks</b> No response worthy of credit.</p>		<ul style="list-style-type: none"> <li>• Trade agreements can be changed overnight (e.g. Trump and the Trans-Pacific Partnership) which will impact quickly on competition issues.</li> <li>• Advances in technology occur rapidly, and there is no way of know what new technology will be available in the future and when this might happen. Implementation depends on a range of human factors e.g. level of development</li> <li>• Land-grabbing is (partly) in response to the climate change issue.</li> <li>• Most of the physical factors, such as climate, temperature, aspect, altitude and slope are long term issues which are known about. Therefore, countries will have adapted to their own physical conditions – i.e. will grow crops suited to their environment thus creating relatively good food security.</li> <li>• Climate change may be the biggest non-human factor impacting on food security - temperature and rainfall will change which will have an impact, but this is likely to be slow enough for provision to be put in place.</li> <li>• Natural disasters are physical events which could quickly threaten food security and these tend to be in defined (tectonically or climatically) areas so people are aware of the threat, even if they are taken by surprise when it strikes.</li> <li>• In some places factors such as unreliable rainfall – unexpected flood or drought – can affect food security.</li> <li>• Human factors include national and international short-term food relief.</li> </ul>

Question		Answer	Marks	Guidance
5	(a)	<p><b>Explain two pieces of evidence that support the theory of continental drift.</b></p> <ul style="list-style-type: none"> <li>• Evidence for sea-floor spreading (✓) where paleomagnetism (✓) has been used to determine the age of sea floor rocks (✓).</li> <li>• Evidence from ancient glaciations (✓) where the geology matches in two places (✓) with anomalous geology in between (✓).</li> <li>• Continents (Africa and South America) (✓) shapes of west and east coasts (✓) seem to fit together like pieces of a jigsaw puzzle (✓).</li> <li>• Fossils from land-based animals (✓) found in South America and Africa (✓) suggesting that the continents were once joined (✓).</li> </ul>	4	<p><b>AO1 – 4 marks</b> 2 x 2 mark (✓) for each correct difference. Focus should be on the knowledge and understanding of each of the two pieces of evidence that support the theory of continental drift</p>
	(b)	<p><b>Suggest how volcanic hazards are affected by types of volcanic eruption.</b></p> <p><b>Level 3 (5-6 marks)</b> Demonstrates <b>thorough</b> knowledge and understanding of volcanic hazards and types of volcanic eruption (AO1).</p> <p><b>Place specific details</b> should be <b>accurate</b> with the amount helping determine where within the Level the response lies.</p> <p>Demonstrates <b>thorough</b> application of knowledge and understanding to provide an <b>accurate, clear</b> and <b>developed analysis</b> as to how volcanic hazards are affected by types of volcanic eruption (AO2).</p> <p><b>Level 2 (3-4 marks)</b> Demonstrates <b>reasonable</b> knowledge and understanding of volcanic hazards and types of volcanic eruption (AO1).</p>	6	<p><b>AO1 – 3 marks</b> Knowledge and understanding of the volcanic hazards and types of volcanic eruption could potentially include:</p> <ul style="list-style-type: none"> <li>• Types of volcanic eruptions include explosive / effusive / hot-spot</li> <li>• Lava flows; pyroclastic flows; gas emissions; tephra; and ash.</li> <li>• Lahars and flooding associated with the melting of ice.</li> <li>• Tsunamis associated with explosive eruptions.</li> </ul> <p><b>AO2 – 3 marks</b> Application of knowledge and understanding to analyse how volcanic hazards are affected by types of volcanic eruption could potentially include:</p>

Question	Answer	Marks	Guidance
	<p><b>Place specific</b> material is present which is <b>partially accurate</b> with the amount helping determine where within the Level the response lies.</p> <p>Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a <b>sound analysis</b> showing some accuracy and development as to how volcanic hazards are affected by types of volcanic eruption (AO2).</p> <p><b>Level 1 (1-2 marks)</b> Demonstrates <b>basic</b> knowledge and understanding of volcanic hazards and types of volcanic eruption (AO1).</p> <p>Little or no <b>place specific</b> material is present and or is inaccurate.</p> <p>Demonstrates <b>basic</b> application of knowledge and understanding to provide a <b>simple analysis</b> showing limited accuracy and little development as to how volcanic hazards are affected by type of volcanic eruption (AO2).</p> <p><b>0 marks</b> No response worthy of credit.</p>		<ul style="list-style-type: none"> <li>• Explosive volcanoes, found at destructive plate boundaries, will have pyroclastic flows and other projectiles given the pressure build up from the complex magma network and plugging of vents due to the high silica content of the magma. Lava flows will be slow moving. Tsunamis may be caused when the eruption is close to the coast / underwater and results in a significant shift in the plates leading to massive displacement of water.</li> <li>• Effusive volcanoes, found at constructive plate boundaries, will have a lower viscosity lava which moves much faster. Less pressure build-up before eruption means little tephra and ash, but gas emissions still possible. If under an ice-sheet (i.e. Iceland) then flooding from meltwater possible.</li> <li>• Hot-spot volcanoes (such as Hawaii) tend to have long-lasting effusive eruptions (see above).</li> </ul>

Question		Answer	Marks	Guidance
	c i	<p>Study <b>Fig.5</b>, which shows the number of deaths from volcanoes in thousands between 1900 – 2014 for a number of countries, and one stage of the standard deviation calculation.</p> <p><b>Using the data from Fig 5 and the formula provided, calculate the standard deviation value. You must show your working. Give your answer correct to 1 decimal place.</b></p> <p><i>Standard Deviation Formula</i></p> $\sigma = \sqrt{\frac{\sum(x - \bar{x})^2}{n}}$ <ul style="list-style-type: none"> <li>• <math>\sum(x - \bar{x})^2 = 63.06844</math></li> <li>• <math>\sum(x - \bar{x})^2/n = 6.306844</math></li> <li>• Standard deviation to 1 d.p. = 2.5</li> </ul>	4	<p><b>AO3 – 4 marks</b></p> <ul style="list-style-type: none"> <li>• <math>\sum(x - \bar{x})^2</math> - 1 mark (✓)</li> <li>• <math>\sum(x - \bar{x})^2/n</math> - 1 mark (✓)</li> <li>• Standard deviation to 1 d.p. - 1 mark (✓)</li> <li>• Showing working - 1 mark (✓)</li> </ul> <p>Allow max 2 marks for error carried forward if subsequent calculations are formulaically correct.</p>
	ii	<p><b>Using evidence from Fig 5, analyse reasons for differences in the number of deaths from volcanoes between countries.</b></p> <p><b>Level 3 (5-6 marks)</b> Demonstrates <b>thorough</b> application of knowledge and understanding to provide clear and developed analysis that shows accuracy as to reasons for differences in the number of deaths from volcanoes between countries. (AO2).</p> <p>Demonstrates <b>thorough</b> investigation and interpretation of the quantitative data resource to fully evidence differences in the number of deaths from volcanoes. There must be strong ideas linking resource evidence to the possible reasons for differences in the number of deaths from volcanoes (AO3).</p>	6	<p><b>AO2 – 3 marks</b></p> <p>Application of knowledge and understanding to analyse reasons for differences in the number of deaths from volcanoes between countries could potentially include:</p> <ul style="list-style-type: none"> <li>• The extent to which the volcanoes are active</li> <li>• The way in which the volcano was being monitored and whether people were given warning to evacuate</li> <li>• The time and duration of the eruption</li> <li>• Whether the technology was available at the time to predict the eruption</li> <li>• How close the country was to a fault line</li> </ul> <p><b>AO3 – 3 marks</b> Evidence from investigation and interpretation of the data</p>

Question	Answer	Marks	Guidance
	<p><b>Level 2 (3-4 marks)</b> Demonstrates <b>reasonable</b> application of knowledge and understanding to provide clear and developed analysis that shows accuracy as to reasons for differences in the number of deaths from volcanoes between countries. (AO2).</p> <p>Demonstrates <b>reasonable</b> investigation and interpretation of the quantitative data resource to fully evidence differences in the number of deaths from volcanoes. There must be good ideas linking resource evidence to the possible reasons for differences in the number of deaths from volcanoes (AO3).</p> <p><b>Level 1 (1-2 marks)</b> Demonstrates <b>basic</b> application of knowledge and understanding to provide clear and developed analysis that shows accuracy as to reasons for differences in the number of deaths from volcanoes between countries. (AO2).</p> <p>Demonstrates <b>basic</b> investigation and interpretation of the quantitative data resource to fully evidence differences in the number of deaths from volcanoes. There must be some ideas linking resource evidence to resource evidence to the possible reasons for differences in the number of deaths from volcanoes (AO3).</p> <p><b>0 marks</b> No response worthy of credit.</p>		<p>could potentially include:</p> <ul style="list-style-type: none"> <li>• Indonesia has the highest volcanic death toll. It is an EDC and therefore not as wealthy as an AC which would have been able to provide more investment into the monitoring of the volcano.</li> <li>• ACs e.g. US able to provide more investment into the monitoring and evacuation.</li> <li>• Democratic Republic of Congo is an LIDC has not had many eruptions, showing that it is a physical rather than economic factor.</li> <li>• Chile has the lowest number of deaths. People tend not to live near volcanoes and there are infrequent eruptions.</li> </ul>

Question	Answer	Marks	Guidance
(d)	<p><b>'Volcanic hazards are easier to manage than earthquake hazards.'</b> How far do you agree with this statement?</p> <p><b>Level 4 (10–12 marks)</b> Demonstrates <b>comprehensive</b> and accurate knowledge and understanding of volcanic and earthquake hazards (AO1).  Demonstrates <b>comprehensive</b> application of knowledge and understanding to provide a detailed and convincing evaluation offering secure judgements leading to rational conclusions that are evidence based as to the extent to which volcanic hazards are easier to manage than earthquake hazards (AO2).</p> <p><b>Level 3 (7-9 marks)</b> Demonstrates <b>thorough</b> and mainly accurate knowledge and understanding of volcanic and earthquake hazards (AO1).  Demonstrates <b>thorough</b> application of knowledge and understanding to provide a detailed evaluation offering generally secure judgements with some link between rational conclusions and evidence as to the extent to which volcanic hazards are easier to manage than earthquake hazards (AO2).</p> <p><b>Level 2 (4-6 marks)</b> Demonstrates <b>reasonable</b> and some accurate knowledge and understanding of volcanic and earthquake hazards (AO1).  Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a sound evaluation offering generalised judgements and conclusions with limited links to evidence as to the extent to which volcanic hazards are easier to manage than earthquake hazards (AO2).</p>	12	<p><b>AO1 – 6 marks</b> Knowledge and understanding of the hazards posed by volcanic and earthquake events and their management could potentially include:</p> <ul style="list-style-type: none"> <li>• volcanic hazards – lava flows; pyroclastic flows; tephra; toxic gases (CO, CO<sub>2</sub>, SO<sub>2</sub>); lahars</li> <li>• Volcanic hazards can be managed by: <ul style="list-style-type: none"> <li>- Building barriers to divert the lava flows around settlements</li> <li>- Monitoring volcanoes for changes in temperature, size, gas emissions</li> <li>- Preparing and practicing evacuation drills and response scenarios</li> <li>- Spraying lava to cool, solidify and stop its flow.</li> </ul> </li> <li>• seismic hazards – ground shaking + ground displacement; liquefaction; landslides + avalanches; tsunami Seismic hazards can be managed by: <ul style="list-style-type: none"> <li>- building aseismically on flat land with reinforcement, cross-bracing and deep foundations to prevent building collapse</li> <li>- Preparing and practicing evacuation drills and response scenarios</li> </ul> </li> </ul> <p><b>AO2 – 6 marks</b> Application of knowledge and understanding to analyse and evaluate the extent to which volcanic hazards are easier to manage than earthquake hazards could potentially include:</p> <ul style="list-style-type: none"> <li>• Some of the methods are easier and cheaper to do than others – practicing evacuation drills is cheaper than building an earthquake-proof building.</li> </ul>

Question		Answer	Marks	Guidance
		<p><b>Level 1 (1-3 marks)</b> Demonstrates <b>basic</b> and/or inaccurate knowledge and understanding of volcanic and earthquake hazards (AO1).</p> <p>Demonstrates <b>basic</b> application of knowledge and understanding offering either unsupported or minimal if any evaluation. Judgements and conclusions, if any, are simplistic regarding the extent to which volcanic hazards are easier to manage than earthquake hazards (AO2).</p> <p><b>0 marks</b> No response worthy of credit.</p>		<ul style="list-style-type: none"> <li>• Some techniques are more effective than others – spraying lava to cool it requires a supply of water and people in the area to do it whereas barriers can be set up and left. It is perhaps cheaper to spray rather than build the barriers, and is less unsightly, but may be less effective.</li> <li>• There is no way to predict exactly when a seismic event will occur, although there are methods which are becoming increasingly more effective, so there is usually less warning than with a volcano, hence harder to take action.</li> <li>• Prediction of volcanic eruption is easier and more effective so taking action can be more thorough.</li> <li>• Some of the hazards created by both events are the same, including disruption of infrastructure, homelessness and death, so the management of these factors would be similar in terms of their demand.</li> <li>• Seismic events tend to impact more people so the management of them is harder.</li> <li>• There are more people living in seismically active zones than live in danger areas near volcanoes.</li> </ul>
6	(a)	<p><b>With reference to Fig. 6 suggest how the impact of climate change on landscape systems might vary globally</b></p> <p><b>Level 3 (6-8 marks)</b> Demonstrates <b>thorough</b> knowledge and understanding of climate change and its impact on landscape systems (AO1).</p> <p>Demonstrates <b>thorough</b> application of knowledge and understanding to provide a clear and developed interpretation that shows accuracy of how the impact of climate change on landscape systems might vary globally (AO2).</p>	8	<p><b>Indicative Content</b> <b>AO1 – 4 marks</b> Knowledge and understanding of the impact of climate change and landscape systems could potentially include:</p> <ul style="list-style-type: none"> <li>• climate change, in particular effects, on geomorphic systems, of changes such as temperatures and levels and types of precipitation</li> <li>• idea that landscape systems are open systems with energy and materials flowing through them</li> <li>• specific points will depend on the landscape system studied by the candidate, coastal (e.g. sea level rise or change in sea temperature), glaciated (e.g. ice</li> </ul>

Question	Answer	Marks	Guidance
	<p>This will be shown by including <b>well-developed</b> ideas linking resource evidence of changes in temperature to global variations in the impact of climate change on landscape systems.</p> <p>There are clear attempts to make synoptic links between content from different parts of the course of study.</p> <p><b>Level 2 (3-5 marks)</b> Demonstrates <b>reasonable</b> knowledge and understanding of climate change and its impact on landscape systems (AO1).</p> <p>Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a sound interpretation that shows some accuracy of how the impact of climate change on landscape systems might vary globally (AO2).</p> <p>This will be shown by including <b>developed</b> ideas linking resource evidence of changes in temperature to global variations in the impact of climate change on landscape systems.</p> <p>There are some attempts to make synoptic links between content from different parts of the course of study but these are not always relevant.</p> <p><b>Level 1 (1-2 marks)</b> Demonstrates <b>basic</b> knowledge and understanding of climate change and its impact on landscape systems (AO1).</p> <p>Demonstrates <b>basic</b> application of knowledge and understanding to provide a simple interpretation that shows limited accuracy of how the impact of climate change on landscape systems might vary globally (AO2).</p>		<p>melt or temperature change) or dryland (e.g. spread of deserts or increased drought)</p> <ul style="list-style-type: none"> <li>• Climate change is going to be uneven across the globe as shown on the resource.</li> <li>• General trend is for an increase in temperature although the resource shows some decreases especially over ocean areas</li> <li>• Temperature fluctuations have been seen in the past and the landscape systems have been impacted by them.</li> </ul> <p><b>AO2 – 4 marks</b> Application of knowledge and understanding to interpret how the impact of climate change on landscape systems may vary globally could potentially include:</p> <ul style="list-style-type: none"> <li>• Increase in temperature in high latitude / altitude areas could result in ice melt which would lead to increased fluvial erosion.</li> <li>• Biggest change in temperature has been across Alaska, Canada and northern Russia which will have affected permafrost and melted ice.</li> <li>• Few places on land are going to have a decrease in temperature – South East Russia is the only notable place which might lead to an advance of glaciers.</li> <li>• Parts of northern Africa are warmer, so likely to see increased desertification of marginal lands.</li> <li>• West coast of North / South America has warmed more than the west coast of Europe / Africa which means that the impact on landscape systems will not be consistent across the globe.</li> <li>• Higher sea temperature in the Pacific will see greater evaporation, and higher orographic rainfall on west coast, so more fluvial erosion, or glacial erosion higher up in the mountains (e.g. Andes).</li> </ul>

Question	Answer	Marks	Guidance
	<p>There will be <b>simple</b> ideas linking resource evidence of changes in temperature to global variations in the impact of climate change on landscape systems.</p> <p>There are limited attempts to make synoptic links between content from different parts of the course of study.</p> <p><b>0 marks</b> No response worthy of credit</p>		<ul style="list-style-type: none"> <li>Higher sea temperatures will lead to focusing of wave energy closer to the shore and cliff faces, increasing coastal erosion, particularly in places with soft rock geology (e.g. Holderness).</li> <li>Climate change may lead to more storms through deeper low-pressure events, creating storm surges which could threaten current coastlines and endanger coastal settlements.</li> </ul>
(b)	<p><b>Examine how climate change could influence the informal representation of place.</b></p> <p><b>Level 3 (6-8 marks)</b> Demonstrates <b>thorough</b> knowledge and understanding of climate change and the informal representation of place (AO1).</p> <p>Demonstrates <b>thorough</b> application of knowledge and understanding to provide a clear and developed analysis that shows accuracy of how climate change could influence the informal representation of place (AO2).</p> <p>There must be <b>well-developed</b> ideas of how climate change influences the informal representation of place.</p> <p>There are clear attempts to make synoptic links between content from different parts of the course of study.</p> <p><b>Level 2 (3-5 marks)</b> Demonstrates <b>reasonable</b> knowledge and understanding of climate change and the informal representation of place (AO1).</p>	8	<p><b>Indicative Content</b> <b>AO1 – 4 marks</b> Knowledge and understanding of climate change and the informal representation of place could potentially include:</p> <ul style="list-style-type: none"> <li>Climate change e.g. rising temperatures leading to; rising sea levels / stronger winds / changing rainfall patterns</li> <li>People associate place with a particular climate – mountains are cold with snow, beaches with palm trees are hot etc.</li> <li>If climate changes, a place is likely to change.</li> <li>Informal representation of place influence people’s perception e.g. advertising a place where different activities are possible will contribute to the informal representation of that place.</li> <li>Informal representation of place provides a globalized view of the world, through the internet and media</li> </ul> <p><b>AO2 – 4 marks</b> Application of knowledge and understanding to analyse how climate change could influence the informal representation of place could potentially include:</p>

Question	Answer	Marks	Guidance
	<p>Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a sound analysis that shows some accuracy of how climate change could influence the informal representation of place (AO2).</p> <p>There must be <b>developed</b> ideas of how climate change influences the informal representation of place.</p> <p>There are some attempts to make synoptic links between content from different parts of the course of study but these are not always relevant.</p> <p><b>Level 1 (1-2 marks)</b> Demonstrates <b>basic</b> knowledge and understanding of climate change and the informal representation of place (AO1).</p> <p>Demonstrates <b>basic</b> application of knowledge and understanding to provide a simple analysis that shows limited accuracy of how climate change could influence the informal representation of place (AO2).</p> <p>This will be shown by including <b>simple</b> ideas of how climate change influences the informal representation of place.</p> <p>There are limited attempts to make synoptic links between content from different parts of the course of study.</p> <p><b>0 marks</b> No response worthy of credit.</p>		<ul style="list-style-type: none"> <li>• Increase in temperature could melt snow and ice and change a 'ski village' to just a village.</li> <li>• Sea level rise could wipe out low-lying coastal settlements relying on their beach as a tourist attraction and removing the 'sea-front' identity.</li> <li>• Increased erosion could change the landscape to make it inaccessible i.e. through deepening of a river channel.</li> <li>• Desertification could make an area 'more extreme' so people feel it is more dangerous / harder to live in than before.</li> <li>• Destinations could become more favourable as a 'summer retreat' – Margate could become the new Majorca if temperatures increased.</li> <li>• The South Downs could become as revered as Champagne for their production of sparkling wine if the temperature increases sufficiently to produce a reliable grape harvest.</li> <li>• People's perception of place is reinforced by informal representations of place through contrasting media such as TV, film, music, art, photography, literature, graffiti and blogs. If the place changes through climate change its informal representation will have to change.</li> </ul>

Question	Answer	Marks	Guidance
7 (a)	<p><b>With reference to Fig 7, suggest how the healthcare mitigation strategies of organisations might impact social inequality in places.</b></p> <p><b>Level 3 (6-8 marks)</b>            Demonstrates <b>thorough</b> knowledge and understanding of healthcare mitigation strategies of organisations and social inequality in places (AO1).</p> <p>Demonstrates <b>thorough</b> application of knowledge and understanding to provide a clear and developed interpretation that shows accuracy of how the healthcare mitigation strategies of organisations might impact social inequality in places (AO2).</p> <p>This will be shown by including <b>well-developed</b> ideas linking resource evidence on healthcare mitigation strategies and impacts on social inequality.</p> <p>There are clear attempts to make synoptic links between content from different parts of the course of study.</p> <p><b>Level 2 (3-5 marks)</b>            Demonstrates <b>reasonable</b> knowledge and understanding of healthcare mitigation strategies of organisations and social inequality in places (AO1).</p> <p>Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a sound interpretation that shows some accuracy of how the healthcare mitigation strategies of organisations might impact social inequality in places (AO2).</p> <p>This will be shown by including <b>developed</b> ideas linking resource evidence on healthcare mitigation strategies and impacts on social inequality strategies.</p>	8	<p><b>Indicative Content</b>  <b>AO1 – 4 marks</b>            Knowledge and understanding of healthcare mitigation strategies put in place by organisations, and social inequality, could potentially include:</p> <ul style="list-style-type: none"> <li>• Organisations could include NGOs / Governments / Charities</li> <li>• Healthcare mitigation strategies might include legislation passed down by government (e.g. Obamacare) or specific programmes delivered by NGOs (e.g. the Gates' Foundation "Decade of Vaccines") or a policy of paid healthcare alongside other/basic provision.</li> <li>• Government intervention is usually through top down initiatives affecting healthcare mitigation strategies. The NHS is an example of top down healthcare</li> <li>• NGOs and charities more likely to use bottom-up methods</li> <li>• Social inequality can be thought of in a number of ways, including through wealth or access to healthcare through               <ul style="list-style-type: none"> <li>○ wealth and poverty in different areas or demographic groups</li> <li>○ access to healthcare which varies according to a range of factors including urban/rural, cost, availability of trained medical staff.</li> </ul> </li> <li>• Obamacare was an attempt to reduce social inequality through universal healthcare.</li> </ul>

Question	Answer	Marks	Guidance
	<p>There are some attempts to make synoptic links between content from different parts of the course of study but these are not always relevant.</p> <p><b>Level 1 (1-2 marks)</b> Demonstrates <b>basic</b> knowledge and understanding of healthcare mitigation strategies of organisations and social inequality in places (AO1).</p> <p>Demonstrates <b>basic</b> application of knowledge and understanding to provide a simple interpretation that shows limited accuracy of how the healthcare mitigation strategies of organisations might impact social inequality in places (AO2).</p> <p>There will be <b>simple</b> ideas linking resource evidence on healthcare mitigation strategies and impacts on social inequality.</p> <p>There are limited attempts to make synoptic links between content from different parts of the course of study.</p> <p><b>0 marks</b> No response worthy of credit</p>		<p><b>AO2 – 4 marks</b> Application of knowledge and understanding to interpret how the healthcare mitigation strategies of organisations might impact social inequality in places could potentially include:</p> <ul style="list-style-type: none"> <li>• Mitigation strategies of different organisations include vaccination programmes which <ul style="list-style-type: none"> <li>○ help to reduce the incidence and spread of communicable diseases thus impacting social inequality</li> <li>○ Free vaccination of all children e.g. UK measles vaccination of babies or cholera vaccination in high risk areas – if taken up benefits all so reduces inequality; if not, can have a detrimental effect to the wider population</li> </ul> </li> <li>• Those who want to can pay for private medical support but some people cannot afford this, hence impacting inequality in ACs, EDCs.</li> <li>• Chicago is highlighted in the figure – suggests that others not living in the city might still access this support and as a result there is inequality based on location.</li> <li>• Free healthcare available 24/7 as in UK (reduces inequality) compared with USA where payment / insurance has been the norm increasing inequality.</li> <li>• Government campaigns on preventive measures (e.g. healthy diet/non-smoking lifestyle etc) may be rejected by some cultures/communities leading to inequality e.g. higher prevalence of non-communicable diseases such as diabetes in ACs (e.g. Japan) and people are less likely to pay</li> </ul>

Question	Answer	Marks	Guidance
			<p>for/accept the need for preventative medicine as opposed to immediately-required intervention.</p> <ul style="list-style-type: none"> <li>The role of government on education, housing, availability of work/income, social support etc all ultimately affect healthcare as well as social inequality (reflected in distribution of deprivation in ACs e.g. UK).</li> </ul>
(b)	<p><b>Examine how patterns of disease and landscape systems can both be influenced by climatic factors.</b></p> <p><b>Level 3 (6-8 marks)</b> Demonstrates <b>thorough</b> knowledge and understanding of patterns of disease / landscape systems and climatic factors that influence them (AO1).</p> <p>Demonstrates <b>thorough</b> application of knowledge and understanding to provide a clear and developed analysis that shows accuracy of how patterns of disease and landscape systems can both be influenced by climatic factors (AO2).</p> <p>There must be <b>well-developed</b> ideas of the influence of climatic factors on landscape systems and patterns of disease.</p> <p>There are clear attempts to make synoptic links between content from different parts of the course of study.</p> <p><b>Level 2 (3-5 marks)</b> Demonstrates <b>reasonable</b> knowledge and understanding of patterns of disease / landscape systems and climatic factors that influence them (AO1).</p>	8	<p><b>Indicative Content</b> <b>AO1 – 4 marks</b> Knowledge and understanding of patterns of disease / landscape systems and climatic factors that influence them could potentially include:</p> <ul style="list-style-type: none"> <li>Knowledge + understanding of landscape systems will focus on one of coastal, glaciated or dryland</li> <li>Both Landscape systems and patterns of disease are influenced by climate (temperature, precipitation, wind); climate change.</li> <li>Patterns of disease vary according to <ul style="list-style-type: none"> <li>the disease (eg malaria which requires water sources in warm humid areas)</li> <li>factors affecting spread of disease (eg tsetse fly/sleeping sickness)</li> </ul> </li> </ul> <p><b>AO2 – 4 marks</b> Application of knowledge and understanding to analyse how patterns of disease and landscape systems can both be influenced by climatic factors could potentially include:</p> <ul style="list-style-type: none"> <li>Some diseases are constrained by climatic factors eg Dengue fever requires specific open, relatively still water sources for mosquitoes to breed which carry the disease, malaria – deserts too hot or dry for mosquitoes to breed</li> </ul>

Question	Answer	Marks	Guidance
	<p>Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a sound analysis that shows some accuracy of how patterns of disease and landscape systems can both be influenced by climatic factors (AO2).</p> <p>There must be <b>developed</b> ideas of the influence of the influence of climatic factors on landscape systems and patterns of disease.</p> <p>There are some attempts to make synoptic links between content from different parts of the course of study but these are not always relevant.</p> <p><b>Level 1 (1-2 marks)</b> Demonstrates <b>basic</b> knowledge and understanding of patterns of disease / landscape systems and climatic factors that influence them (AO1).</p> <p>Demonstrates <b>basic</b> application of knowledge and understanding to provide a simple analysis that shows limited accuracy of how patterns of disease and landscape systems can both be influenced by climatic factors (AO2).</p> <p>This will be shown by including <b>simple</b> ideas of the influence of the influence of climatic factors on landscape systems and patterns of disease.</p> <p>There are limited attempts to make synoptic links between content from different parts of the course of study.</p> <p><b>0 marks</b> No response worthy of credit.</p>		<ul style="list-style-type: none"> <li>- Landscapes where it is hard for humans to survive because of the climate are likely to reduce vectors of disease thus affecting patters of disease.</li> <li>- Landscapes with strong winds make it difficult for some airborne pathogens to be effective, (or malarial mosquitoes to survive).</li> <li>- Seasonal changes in climate affect patterns of disease and landscape systems. <ul style="list-style-type: none"> <li>o Winter weather in the UK raises the incidence of flu and respiratory diseases. It also affects landscapes (strong winds, high rainfall, low temperatures) eg by increasing coastal erosion, freeze-thaw weathering, replenishing aquifers and rivers in dry areas.</li> <li>o Periods of drought or monsoon rains influence disease outbreaks and can affect landscapes eg by increasing weathering, erosion, transportation and deposition.</li> </ul> </li> </ul>

Question		Answer	Marks	Guidance
8	(a)	<p><b>With reference to Fig 8, suggest how oceans are used in determining place profiles.</b></p> <p><b>Level 3 (6-8 marks)</b> Demonstrates <b>thorough</b> knowledge and understanding of oceans and determining place profiles (AO1).</p> <p>Demonstrates <b>thorough</b> application of knowledge and understanding to provide a clear and developed interpretation that shows accuracy of how oceans are used in determining place profiles (AO2).</p> <p>This will be shown by including <b>well-developed</b> ideas linking resource evidence on how oceans are used in determining place profiles.</p> <p>There are clear attempts to make synoptic links between content from different parts of the course of study.</p> <p><b>Level 2 (3-5 marks)</b> Demonstrates <b>reasonable</b> knowledge and understanding of oceans and determining place profiles (AO1).</p> <p>Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a sound interpretation that shows some accuracy of how oceans are used in determining place profiles (AO2).</p> <p>This will be shown by including <b>developed</b> ideas linking resource evidence on how oceans are used in determining place profiles.</p> <p>There are some attempts to make synoptic links between content from different parts of the course of study but these are not always relevant.</p>	8	<p><b>Indicative Content</b> <b>AO1 – 4 marks</b> Knowledge and understanding of oceans and determining place profiles could potentially include:</p> <ul style="list-style-type: none"> <li>• Place profile is a composite picture of the place.</li> <li>• A range of factors contribute to representation of place profiles including demographic, socioeconomic, cultural, political, built and natural characteristics.</li> <li>• The use of oceans in determining place profiles is best done along ocean margins.</li> <li>• Given the changeability of the oceans, depending on the weather, the impact oceans have on determining place profiles can also be changeable.</li> <li>• Oceans are large bodies of water that touch various parts of land and are often shared by many countries.</li> <li>• The same ocean may be part of different ‘place profiles’ at different locations.</li> </ul> <p><b>AO2 – 4 marks</b> Application of knowledge and understanding to interpret how oceans are used in determining place profiles could potentially include:</p> <ul style="list-style-type: none"> <li>• The Great Ocean Road in Fig 8 is used in determining the place profile because <ul style="list-style-type: none"> <li>○ it is somewhere that people who are visiting Melbourne might like to visit.</li> <li>○ It is a means of getting from A to B and also a way to see and experience the ocean because follows the coastline</li> </ul> </li> <li>• The ocean shown in Fig 8 is used to represent this particular place profile in a strong way <ul style="list-style-type: none"> <li>○ it is the main natural feature</li> </ul> </li> </ul>

Question	Answer	Marks	Guidance
9 (a)	<p><b>With reference to Fig. 9, suggest how food security may be affected by migration to cities.</b></p> <p><b>Level 3 (6-8 marks)</b>            Demonstrates <b>thorough</b> knowledge and understanding of food security and migration to cities (AO1).</p> <p>Demonstrates <b>thorough</b> application of knowledge and understanding to provide a clear and developed interpretation that shows accuracy of how food security may be affected by migration to cities (AO2).</p> <p>This will be shown by including <b>well-developed</b> ideas linking resource evidence on food security and migration to cities.</p> <p>There are clear attempts to make synoptic links between content from different parts of the course of study.</p> <p><b>Level 2 (3-5 marks)</b>            Demonstrates <b>reasonable</b> knowledge and understanding of food security and migration to cities (AO1).</p> <p>Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a sound interpretation that shows some accuracy of how food security may be affected by migration to cities (AO2).</p> <p>This will be shown by including <b>developed</b> ideas linking resource evidence on food security and migration to cities.</p> <p>There are some attempts to make synoptic links between content from different parts of the course of study but these are not always relevant.</p>	8	<p><b>Indicative Content</b></p> <p><b>AO1 – 4 marks</b>            Knowledge and understanding of food security and migration to cities could potentially include:</p> <ul style="list-style-type: none"> <li>• Food security is defined by the World Food Programme (WFP) as having three pillars; availability, access and utilisation.</li> <li>• Pattern of food security is dynamic – varying within countries</li> <li>• A number of interrelated factors influence food security e.g. physical, social, economic and political</li> <li>• Contrasting levels of economic development has implications for food security</li> <li>• Strategies and techniques to improve food security – technology innovation</li> <li>• Shifting flows of people (migration) and resources (natural e.g. food) changed over time</li> <li>• Distribution of resources are not evenly spread within and between places</li> <li>• Strategies to rebrand places e.g. food</li> </ul> <p><b>AO2 – 4 marks</b>            Application of knowledge and understanding to interpret how food security is affected by migration to cities could potentially include:</p> <ul style="list-style-type: none"> <li>• From Fig.9, There is an increasing number of migrants / urban population which will increase demand on limited food resources, reducing food security.</li> <li>• Most migration to cities now occurs in LIDCs where infrastructure for importing food from surrounding regions and countries is less comprehensive than cities in ACs such as London.</li> </ul>

Question	Answer	Marks	Guidance
	<p><b>Level 1 (1-2 marks)</b> Demonstrates <b>basic</b> knowledge and understanding of food security and migration to cities (AO1).</p> <p>Demonstrates <b>basic</b> application of knowledge and understanding to provide a simple interpretation that shows limited accuracy of how food security may be affected by migration to cities (AO2).</p> <p>There will be <b>simple</b> ideas linking resource evidence on food security and migration to cities.</p> <p>There are limited attempts to make synoptic links between content from different parts of the course of study.</p> <p><b>0 marks</b> No response worthy of credit</p>		<ul style="list-style-type: none"> <li>• Rate of migration to cities, increases the geographical size of an urban area which reduces the availability of agricultural land, putting pressure on food security e.g. Shanghai</li> <li>• Whilst much of the food comes from rural areas as shown in Fig. 9, if populations migrate to cities, there may be fewer people to work the land. This could compromise food security in both areas</li> <li>• Volume of migrants to particular city areas can improve food security due to the pressure on government to supply / import food.</li> <li>• Migration improves food security as remittances can ensure populations have access to food for consumption</li> <li>• Shifting flows of people could be acknowledged as part of a sustainable food system</li> <li>• Migrant populations in marginal city areas may want / need to provide their own food supplies and become urban gardeners therefore improving their food supplies e.g. sack gardening in Nairobi, Kenya</li> <li>• FAO encourages sustainable rural development with changes in food production to ensure food security and rural livelihoods. Therefore the volume of migrants could be impacted.</li> <li>• Inequalities in cities and the uneven distribution of resources (food) so poorer families will have less to spend on food, thus reducing their food security e.g. Study in New York found 1.4 million people were food insecure between 2013-2015 due to the price of food. There was a 64% increase in the number of immigrants accessing food supplies.</li> </ul>

Question	Answer	Marks	Guidance
(b)	<p><b>Examine how food security can be negatively affected by landscape systems.</b></p> <p><b>Level 3 (6-8 marks)</b>            Demonstrates <b>thorough</b> knowledge and understanding of food security and landscape systems (AO1).</p> <p>Demonstrates <b>thorough</b> application of knowledge and understanding to provide a clear and developed analysis that shows accuracy of how food security can be negatively affected by landscape systems (AO2).</p> <p>There must be <b>well-developed</b> ideas of the effect of landscape systems on food security.</p> <p>There are clear attempts to make synoptic links between content from different parts of the course of study.</p> <p><b>Level 2 (3-5 marks)</b>            Demonstrates <b>reasonable</b> knowledge and understanding of food security and landscape systems (AO1).</p> <p>Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a sound analysis that shows some accuracy of how food security can be negatively affected by landscape systems (AO2).</p> <p>There must be <b>developed</b> ideas of the effect of landscape systems on food security.</p> <p>There are some attempts to make synoptic links between content from different parts of the course of study but these are not always relevant.</p> <p><b>Level 1 (1-2 marks)</b>            Demonstrates <b>basic</b> knowledge and understanding of food security and landscape systems (AO1).</p>	8	<p><b>Indicative Content</b>  <b>AO1 – 4 marks</b>            Knowledge and understanding of food security and landscape systems could potentially include:</p> <ul style="list-style-type: none"> <li>• knowledge + understanding of landscape systems will focus on one of coastal, glaciated or dryland landscape systems linked to:               <ul style="list-style-type: none"> <li>○ climate: temperature – weathering processes; optimum temperatures for crop and livestock growth;</li> <li>○ water – weathering + erosional processes (including ice); water needs of plants and animals</li> <li>○ relief: altitude, slope angle and aspect influence climatic factors; altitude + aspect influence micro-climate; slope angle</li> </ul> </li> <li>• Food security is linked to physical conditions required for growing food including, air, climate, soil and water and is affected by geology, soil, length of growing season</li> <li>• Food security is a dynamic status and is dependent on the physical factors associated with landscape systems, some of which are unpredictable.</li> </ul> <p><b>AO2 – 4 marks</b>            Application of knowledge and understanding to analyse how food security can be negatively affected by landscape systems could potentially include:</p> <ul style="list-style-type: none"> <li>• Some coastal areas have higher rainfall and cooler conditions which may prevent some crops growing.</li> <li>• Coastal areas are subject to sea level rise through climate change hence may suffer reduced food security over time.</li> </ul>

Question		Answer	Marks	Guidance
		<p>Demonstrates <b>basic</b> application of knowledge and understanding to provide a simple analysis that shows limited accuracy of how food security can be negatively affected by landscape systems (AO2).</p> <p>This will be shown by including <b>simple</b> ideas of the effect of landscape systems on food security.</p> <p>There are limited attempts to make synoptic links between content from different parts of the course of study.</p> <p><b>0 marks</b> No response worthy of credit.</p>		<ul style="list-style-type: none"> <li>• Drylands tend to support little crop growth; farmers have had to adapt techniques over time to be able to harvest crops in marginal areas (such as using diguettes to collect water and prevent soil erosion).</li> <li>• Food security in dryland landscape systems can be improved with irrigation (California) but on a large scale this requires significant economic investment.</li> <li>• Glacial areas have rich fluvioglacial valley deposits which can be prevented from providing fertile farm land if dammed.</li> <li>• Glacial areas can also be cold (at higher altitude) for some or all the year, so crop yield might be low.</li> <li>• Fast moving landscapes (eg coastal, where erosion and flooding may occur) may be more susceptible to quick changes in food security than others.</li> </ul>
10	(a)	<p><b>With reference to Figure 10, suggest how tectonically active areas are important in influencing the representation of place.</b></p> <p><b>Level 3 (6-8 marks)</b> Demonstrates <b>thorough</b> knowledge and understanding of tectonically active areas and the representation of place. (AO1).</p> <p>Demonstrates <b>thorough</b> application of knowledge and understanding to provide a clear and developed interpretation that shows accuracy of how tectonically active areas are important in influencing the representation of place. (AO2).</p> <p>This will be shown by including <b>well-developed</b> ideas linking resource evidence on tectonically active areas and the representation of place.</p>	8	<p><b>Indicative Content</b> <b>AO1 – 4 marks</b> Knowledge and understanding of tectonically active areas and the representation of place could potentially include:</p> <ul style="list-style-type: none"> <li>• tectonically active areas can include both volcano (as in the resource) and earthquake events</li> <li>• tectonically active areas are clearly defined across the globe</li> <li>• ways of representing a place can be categorised as <ul style="list-style-type: none"> <li>○ either formal – census, geospatial data</li> <li>○ informal – wide diversity of media (television / film / music / art / photography / literature / graffiti / blogs) offer representations of a place</li> </ul> </li> </ul>

Question	Answer	Marks	Guidance
	<p>There are clear attempts to make synoptic links between content from different parts of the course of study.</p> <p><b>Level 2 (3-5 marks)</b> Demonstrates <b>reasonable</b> knowledge and understanding of tectonically active areas and the representation of place. (AO1).</p> <p>Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a sound interpretation that shows some accuracy of how tectonically active areas are important in influencing the representation of place. (AO2).</p> <p>This will be shown by including <b>developed</b> ideas linking resource evidence on tectonically active areas and the representation of place.</p> <p>There are some attempts to make synoptic links between content from different parts of the course of study but these are not always relevant.</p> <p><b>Level 1 (1-2 marks)</b> Demonstrates <b>basic</b> knowledge and understanding of tectonically active areas and the representation of place. (AO1).</p> <p>Demonstrates <b>basic</b> application of knowledge and understanding to provide a simple interpretation that shows limited accuracy of how tectonically active areas are important in influencing the representation of place. (AO2).</p> <p>There will be <b>simple</b> ideas linking resource evidence on tectonically active areas and the representation of place.</p> <p>There are limited attempts to make synoptic links between content from different parts of the course of study.</p> <p><b>0 marks</b> No response worthy of credit.</p>		<ul style="list-style-type: none"> <li>• Representation of place can change over time, both via the medium of representation but also via the stakeholders.</li> </ul> <p><b>AO2 – 4 marks</b> Application of knowledge and understanding to interpret how tectonically active areas are important in influencing the representation of place could potentially include:</p> <ul style="list-style-type: none"> <li>• Stakeholders in tectonically active areas want to represent the place as ‘safe’ to attract people to live and to visit</li> <li>• The resource represents how people still can choose to live in areas with tectonic hazards</li> <li>• Many tectonically active areas (e.g. Tokyo) are densely populated, so it is important to ensure <ul style="list-style-type: none"> <li>○ Buildings are safe</li> <li>○ The representation of place through national and international media makes that clear, and</li> <li>○ Spreads information out to people in the event of an earthquake.</li> </ul> </li> <li>• Areas of tectonic activity, such as Etna and Vesuvius, are located in areas of high tourism and economic value, so it might be important to represent these in such a way that the tectonic risk is not the overarching theme.</li> <li>• Social media and the internet can show a volcano such as that in the resource to be dangerous and frightening whilst erupting, but placid and safe when not.</li> </ul>

Question	Answer	Marks	Guidance
(b)	<p><b>Examine how responses to tectonic hazards might be influenced by landscape systems.</b></p> <p><b>Level 3 (6-8 marks)</b> Demonstrates <b>thorough</b> knowledge and understanding of landscape systems and responses to tectonic hazards (AO1).</p> <p>Demonstrates <b>thorough</b> application of knowledge and understanding to provide a clear and developed analysis that shows accuracy of how responses to tectonic hazards might be influenced by landscape systems (AO2).</p> <p>There must be <b>well-developed</b> ideas of how responses to tectonic hazards are influenced by landscape systems.</p> <p>There are clear attempts to make synoptic links between content from different parts of the course of study.</p> <p><b>Level 2 (3-5 marks)</b> Demonstrates <b>reasonable</b> knowledge and understanding of landscape systems and responses to tectonic hazards (AO1).</p> <p>Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a sound analysis that shows some accuracy of how responses to tectonic hazards might be influenced by landscape systems (AO2).</p> <p>There must be <b>developed</b> ideas of how responses to tectonic hazards are influenced by landscape systems.</p> <p>There are some attempts to make synoptic links between content from different parts of the course of study but these are not always relevant.</p>	8	<p><b>Indicative Content</b> <b>AO1 – 4 marks</b> Knowledge and understanding of responses to tectonic hazards and landscape systems could potentially include:</p> <ul style="list-style-type: none"> <li>• knowledge + understanding of landscape systems will focus on one of coastal, glaciated or dryland <ul style="list-style-type: none"> <li>○ Coastal – threat of tsunamis after an earthquake.</li> <li>○ Glaciated – likely to be a cold, mountainous area which may be difficult to access and have challenges such as avalanches and rock falls following the destabilisation of an earthquake.</li> <li>○ Drylands – existing harsh conditions make it harder for rescuers to operate with damaged infrastructure.</li> </ul> </li> <li>• Responses to tectonic hazards will vary to some extent with hazard e.g. spraying lava to cool, solidify and stop its flow after a volcano, moving people inland to higher ground when there is a tsunami.</li> <li>• Many responses to hazards will be similar such as rescue and emergency relief following disruption of infrastructure, homelessness and death</li> </ul> <p><b>AO2 – 4 marks</b> Application of knowledge and understanding to analyse how responses to tectonic hazards might be influenced by landscape systems could potentially include:</p> <ul style="list-style-type: none"> <li>• Drylands are likely to be more susceptible to a breakdown in water infrastructure and will require fresh water as a priority in response to a tectonic hazard such as a disruptive earthquake.</li> </ul>

Question	Answer	Marks	Guidance
	<p><b>Level 1 (1-2 marks)</b> Demonstrates <b>basic</b> knowledge and understanding of landscape systems and responses to tectonic hazards (AO1).</p> <p>Demonstrates <b>basic</b> application of knowledge and understanding to provide a simple analysis that shows limited accuracy of how responses to tectonic hazards might be influenced by landscape systems (AO2).</p> <p>This will be shown by including <b>simple</b> ideas of how responses to tectonic hazards are influenced by landscape systems.</p> <p>There are limited attempts to make synoptic links between content from different parts of the course of study.</p> <p><b>0 marks</b> No response worthy of credit.</p>		<ul style="list-style-type: none"> <li>• Coastal areas will have the added threat of tsunamis and the way that this will influence responses to a tectonic hazard may be to interrupt rescue work</li> <li>• Glacial landscapes will have the additional challenge of low temperatures and possible meltwater from lava contact with ice to contend with for example in Iceland with the additional risk of flooding.</li> <li>• Landscape could make access difficult for rescue effort to reach the epicentre or volcanic hazard.</li> <li>• Some landscapes might require specialist knowledge or equipment to access and operate within the area.</li> </ul>
11*	<p><b>‘There is strong evidence that the world has warmed since the late-nineteenth century.’ To what extent is this true?</b> <b>AO1</b> <b>Level 4 (8-10 marks)</b> Demonstrates <b>comprehensive</b> knowledge and understanding of evidence that the world has warmed since the late nineteenth century.</p> <p><b>Level 3 (5–7 marks)</b> Demonstrates <b>thorough</b> knowledge and understanding of evidence that the world has warmed since the late-nineteenth century.</p> <p><b>Level 2 (3-4 marks)</b> Demonstrates <b>reasonable</b> knowledge and understanding of evidence that the world has warmed since the late-nineteenth century.</p>	<p><b>20</b> <b>AO1</b> <b>x10</b> <b>AO2</b> <b>x10</b></p>	<p><b>Indicative content</b> <b>AO1 – 10 marks</b> Knowledge and understanding of evidence that the world has warmed since the late nineteenth century could potentially include:</p> <ul style="list-style-type: none"> <li>• Consistent rise in global land surface and atmospheric temperatures. Many facts and figures available to support this e.g. 1°C rise on average land temperatures recorded in 2014, which was also the 38<sup>th</sup> consecutive year recording above average annual global temperatures.</li> <li>• Rate of increase seems to be accelerating. 9 out of 10 of the warmest years on record between 2001 and 2011.</li> <li>• Increases in ocean surface temperatures recorded. UK waters have increased 0.7°C in the past 30 years.</li> </ul>

Question	Answer	Marks	Guidance
	<p><b>Level 1 (1–2 marks)</b> Demonstrates <b>basic</b> knowledge and understanding of evidence that the world has warmed since the late-nineteenth century. <b>0 marks</b> - No response worthy of credit.</p> <p><b>AO2</b> <b>Level 4 (8–10 marks)</b> Demonstrates <b>comprehensive</b> application of knowledge and understanding to provide a clear, developed and convincing analysis that is fully accurate of evidence of climate change. Higher level answers should address the evidence of more sceptical views.</p> <p>Demonstrates <b>comprehensive</b> application of knowledge and understanding to provide a detailed and substantiated evaluation that offers secure judgements leading to rational conclusions that are evidence based as to the extent to which it is true that there is strong evidence that the world has warmed since the late-nineteenth century.</p> <p><b>Level 3 (5–7 marks)</b> Demonstrates <b>thorough</b> application of knowledge and understanding to provide a clear and developed analysis that shows accuracy of evidence of climate change.</p> <p>Demonstrates <b>thorough</b> application of knowledge and understanding to provide a detailed evaluation that offers generally secure judgements, with some link between rational conclusions and evidence as to the extent to which it is true that there is strong evidence that the world has warmed since the late-nineteenth century.</p>		<p><b>Guidance</b></p> <ul style="list-style-type: none"> <li>• Shrinking of valley glaciers and ice sheets – today 98% of the world’s valley glaciers are retreating e.g. Alps, Andes. Greenland and Antarctic ice sheets are shrinking, 1/5 of Antarctic sea ice melted 1950-2000.</li> <li>• Rising sea levels – melting of ice and thermal expansion leading to sea level rise of 20cm 1900-2000.</li> <li>• Increased atmospheric water vapour. For every 1°C increase in temperature rising levels of water vapour will double the effect.</li> <li>• Decreasing snow cover and sea ice. Satellite images enable measurement of the decline of snow cover and sea ice extent.</li> <li>• Ecological evidence – habitat change, change in migration patterns, relocating of species, impacts such as the progress of coral bleaching.</li> </ul> <p><b>AO2 – 10 marks</b> Application of knowledge and understanding to analyse and evaluate the extent to which it is true that there is strong evidence that the world has warmed since the late-nineteenth century could potentially include:</p> <ul style="list-style-type: none"> <li>• To what extent is the data quoted accurate and reliable.</li> <li>• Debate that climate records show predominantly that the world’s climate is ‘unstable’ and fluctuating rather than consistently warming.</li> <li>• There are anomalies in the warming trend particularly in the 60s and 70s.</li> <li>• The rate of change in global temperatures has not been totally constant e.g. cool periods of 1960-1970s.</li> </ul>

Question	Answer	Marks	Guidance
	<p><b>Level 2 (3–4 marks)</b> Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a sound analysis that shows some accuracy of evidence of climate change.</p> <p>Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a sound evaluation that offers generalised judgements and conclusions, with limited use of evidence as to the extent to which it is true that there is strong evidence that the world has warmed since the late-nineteenth century.</p> <p><b>Level 1 (1–2 marks)</b> Demonstrates <b>basic</b> application of knowledge and understanding to provide a simple analysis that shows limited accuracy of the evidence of climate change.</p> <p>Demonstrates <b>basic</b> application of knowledge and understanding to provide an un-supported evaluation that offers simple conclusions as to the extent to which it is true that there is strong evidence that the world has warmed since the late-nineteenth century.</p> <p><b>0 marks</b> No response worthy of credit.</p> <p><b>Quality of extended response</b></p> <p><b>Level 4</b> There is a well-developed line of reasoning which is clear and logically structured. The information presented is relevant and substantiated.</p> <p><b>Level 3</b> There is a line of reasoning presented with some structure. The information presented is in the most-part relevant and supported by some evidence.</p>		<ul style="list-style-type: none"> <li>• There is a question of scale and the location of recorded evidence. In some areas glaciers, have been recorded as advancing and data from the northern and southern hemisphere can be different e.g. cooling in the northern hemisphere 1946-75 but warming patterns in the southern hemisphere.</li> <li>• There are different views on the ‘strength’ of the evidence e.g. IPCC, NGOs, national governments.</li> <li>• The view that the atmosphere is extremely complex and often behaves in a fluctuating manner.</li> <li>• The question of the reliability and accuracy of historical evidence that may be less accurate than new technologies e.g. satellites, radar and sonar.</li> <li>• High level responses may differentiate further between medium and short term evidence e.g. over the past 6 decades and over the past 4 decades.</li> <li>• Views that contradict climate change may include: land-based temperature recording stations vary in their data, some suggest an over reliance on computer modelling that is inaccurate, the sensitivity of the Earth’s atmosphere makes accurate prediction very difficult, some believe a modest amount of warming could be beneficial to human activities, some question the balance of the cost of implementing GGE targets and the potential gain of just 0.14°C reduction in temperature.</li> </ul>

Question	Answer	Marks	Guidance
	<p><b>Level 2</b> The information has some relevance and is presented with limited structure. The information is supported by limited evidence.</p> <p><b>Level 1</b> The information is basic and communicated in an unstructured way. The information is supported by limited evidence and the relationship to the evidence may not be clear.</p>		
12*	<p><b>Discuss the view that effective responses to climate change require more than international directives.</b></p> <p><b>AO1</b> <b>Level 4 (8-10 marks)</b> Demonstrates <b>comprehensive</b> knowledge and understanding of responses to climate change.</p> <p><b>Level 3 (5–7 marks)</b> Demonstrates <b>thorough</b> knowledge and understanding of responses to climate change.</p> <p><b>Level 2 (3-4 marks)</b> Demonstrates <b>reasonable</b> knowledge and understanding of responses to climate change.</p> <p><b>Level 1 (1–2 marks)</b> Demonstrates <b>basic</b> knowledge and understanding of the responses to climate change.</p> <p><b>0 marks</b> No response worthy of credit.</p>	20	<p><b>Indicative content</b> <b>AO1 – 10 marks</b> Knowledge and understanding of responses to climate change could potentially include:</p> <ul style="list-style-type: none"> <li>• Scale is an important consideration and can extend from global to local.</li> <li>• Global scale responses include for example: the role of the IPCC in shaping global policy.</li> <li>• International directives such as Kyoto Protocol, Paris, Rio Earth Summit, Bali conference.</li> <li>• National level – may refer to any named example.</li> <li>• Local or sub-national level – policy of local councils, local schools, local interest groups.</li> <li>• Policies such as carbon trading and carbon credits – a response which exists at a variety of scales.</li> <li>• Land use change – increases planting of grasslands and afforestation.</li> <li>• Transport innovations for road and air transport.</li> <li>• Responses of NGOs such as met office, British Antarctic Survey, Friends of the Earth.</li> </ul> <p>Some candidates may focus on mitigation and adaptation strategies to demonstrate their knowledge and understanding of responses to climate change.</p>

Question	Answer	Marks	Guidance
	<p><b>AO2</b></p> <p><b>Level 4 (8–10 marks)</b> Demonstrates <b>comprehensive</b> application of knowledge and understanding to provide a clear, developed and convincing analysis that is fully accurate of the effectiveness of responses to climate change.</p> <p>Demonstrates <b>comprehensive</b> application of knowledge and understanding to provide a detailed and substantiated evaluation that offers secure judgements leading to rational conclusions that are evidence based as to whether effective responses to climate change require more than international directives.</p> <p><b>Level 3 (5–7 marks)</b> Demonstrates <b>thorough</b> application of knowledge and understanding to provide a clear and developed analysis that shows accuracy of the effectiveness of responses to climate change.</p> <p>Demonstrates <b>thorough</b> application of knowledge and understanding to provide a detailed evaluation that offers generally secure judgements, with some link between rational conclusions and evidence as to whether effective responses to climate change require more than international directives.</p> <p><b>Level 2 (3–4 marks)</b> Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a sound analysis that shows some accuracy of the effectiveness of responses to climate change.</p> <p>Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a sound evaluation that offers generalised judgements and conclusions, with limited use of evidence as to whether effective responses to climate change require more than international directives.</p>		<p><b>AO2 – 10 marks</b> Application of knowledge and understanding to analyse and evaluate the view that the most effective responses to climate change require more than international directives could potentially include:</p> <ul style="list-style-type: none"> <li>• A cost and benefit analysis of international directives – the expense, the complexity of reaching a consensus, agreements are often not fully ratified, countries fail to meet their individual targets with no real penalty raises the question of meaningful enforcement.</li> <li>• A co-ordinated response at a range of scales is often called for.</li> <li>• Carbon trading schemes have advantages and disadvantages – they may act as an incentive to develop new technologies which reduce carbon emissions, however, they are also complex and there are difficulties in accurately measuring a firm's or country's pollution.</li> <li>• Climate change is a global problem and needs a global solution, therefore, international directives are key.</li> <li>• International directives that are not fair and consistent may cause industrial development to shift from countries with tight controls on carbon emissions to those with less controls, therefore not addressing the problem – just shifting/concentrating it.</li> <li>• Local engagement at the individual level is effective as it is lifestyle changes that can make an impact. Individuals evaluate the costs and benefits of decisions such as insulation, white goods with economy settings, renewable energy supplies.</li> </ul>

Question	Answer	Marks	Guidance
	<p><b>Level 1 (1–2 marks)</b> Demonstrates <b>basic</b> application of knowledge and understanding to provide a simple analysis that shows limited accuracy of the effectiveness of responses to climate change.</p> <p>Demonstrates <b>basic</b> application of knowledge and understanding to provide an un-supported evaluation that offers simple conclusions as to whether effective responses to climate change require more than international directives.</p> <p><b>0 marks</b> No response worthy of credit.</p> <p><b>Quality of extended response</b></p> <p><b>Level 4</b> There is a well-developed line of reasoning which is clear and logically structured. Land use change leading to less food production and a shortage of supply</li> <li>5. Human impacts on biodiversity which may remove species that prevent disease outbreaks in crops.</li> </ol>

Question	Answer	Marks	Guidance
	<p>Demonstrates <b>comprehensive</b> application of knowledge and understanding to provide a detailed and substantiated evaluation that offers secure judgements leading to rational conclusions that are evidence based as to the extent to which shocks to the food system the result of natural rather than human factors.</p> <p><b>Level 3 (5–7 marks)</b> Demonstrates <b>thorough</b> application of knowledge and understanding to provide a clear and developed analysis that shows accuracy of how natural and human factors result in shocks to the food system.</p> <p>Demonstrates <b>thorough</b> application of knowledge and understanding to provide a detailed evaluation that offers generally secure judgements, with some link between rational conclusions and evidence as to the extent to which shocks to the food system the result of natural rather than human factors.</p> <p><b>Level 2 (3–4 marks)</b> Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a sound analysis that shows some accuracy of how natural and human factors result in shocks to the food system.</p> <p>Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a sound evaluation that offers generalised judgements and conclusions, with limited use of evidence as to the extent to which shocks to the food system the result of natural rather than human factors.</p> <p><b>Level 1 (1–2 marks)</b> Demonstrates <b>basic</b> application of knowledge and understanding to provide a simple analysis that shows limited accuracy of how natural and human factors result in shocks to the food system.</p>		<p>6. Political unrest e.g. war, civil unrest, leading to food shortages</p> <p>7. Economic factors such as increased transport costs leading to distribution issues and potential shortages.</p> <p><b>AO2 – 10 marks</b> Application of knowledge and understanding to analyse and evaluate the extent to which shocks to the food system are the result of natural rather than human factors could potentially include:</p> <ul style="list-style-type: none"> <li>• Sometimes shocks are the result of ‘purely’ human causes e.g. price fluctuations, land-use change and political unrest.</li> <li>• Sometimes shocks are natural events which cannot be stopped e.g. tectonic activity, natural population explosion of pests/disease.</li> <li>• Frequently the shock can be shown to have a combination of human and physical causes:</li> <li>• Often an impact, be it natural or human induced, in one country can lead to a knock-on effect in another e.g. natural disaster and crop failure in country A leading to a shortage of supply due to higher demand in country. This can mean a combination of physical and human factors, natural disaster, pricing and distribution issues.</li> <li>• Sometimes the same issue can result from a combination of natural and human factors e.g. water scarcity resulting from physical and economic stress.</li> <li>• Physical factors which lead to food shocks such as climate change can be induced by human activity.</li> <li>• Physical factors such as tectonic hazards which cause disruption to the production and distribution of food can be the result of a lack of mitigation by humans.</li> </ul>

Question	Answer	Marks	Guidance
	<p>Demonstrates <b>basic</b> application of knowledge and understanding to provide an un-supported evaluation that offers simple conclusions as to the extent to which shocks to the food system the result of natural rather than human factors.</p> <p><b>0 marks</b> No response worthy of credit.</p> <p><b>Quality of extended response</b></p> <p><b>Level 4</b> There is a well-developed line of reasoning which is clear and logically structured. The information presented is relevant and substantiated.</p> <p><b>Level 3</b> There is a line of reasoning presented with some structure. The information presented is in the most-part relevant and supported by some evidence.</p> <p><b>Level 2</b> The information has some relevance and is presented with limited structure. The information is supported by limited evidence.</p> <p><b>Level 1</b> The information is basic and communicated in an unstructured way. The information is supported by limited evidence and the relationship to the evidence may not be clear.</p>		<ul style="list-style-type: none"> <li>• It is difficult to measure the extent of the source of a food shock as the issues are often complex and interrelated, arising out of a range of human and physical factors.</li> <li>• Food shocks affect countries across the development spectrum and the scale of the impact varies. A human induced problem may have a physical impact e.g. ACs contributing to climate change and bringing about climate variations which impact food production in LIDCs.</li> </ul>

Question	Answer	Marks	Guidance
18*	<p><b>'International co-operation is essential to guarantee future food security for all nations.'</b> Discuss.</p> <p><b>AO1</b>  <b>Level 4 (8-10 marks)</b>            Demonstrates <b>comprehensive</b> knowledge and understanding of food security for all nations and international co-operation.</p> <p><b>Level 3 (5–7 marks)</b>            Demonstrates <b>thorough</b> knowledge and understanding of food security for all nations and international co-operation.</p> <p><b>Level 2 (3-4 marks)</b>            Demonstrates <b>reasonable</b> knowledge and understanding of food security for all nations and international co-operation.</p> <p><b>Level 1 (1–2 marks)</b>            Demonstrates <b>basic</b> knowledge and understanding of food security for all nations and international co-operation.</p> <p><b>0 marks</b>            No response worthy of credit.</p> <p><b>AO2</b>  <b>Level 4 (8–10 marks)</b>            Demonstrates <b>comprehensive</b> application of knowledge and understanding to provide a clear, developed and convincing analysis that is fully accurate of how international co-operation could guarantee future food security.</p> <p>Demonstrates <b>comprehensive</b> application of knowledge and understanding to provide a detailed and substantiated evaluation that offers secure judgements leading to rational conclusions that are evidence based as to whether international co-operation is essential to guarantee future food security.</p>	20	<p><b>Indicative content</b>  <b>AO1 – 10 marks</b>            Knowledge and understanding of food security for all nations and international co-operation could potentially include:</p> <ul style="list-style-type: none"> <li>• The concept of food security is built on food access, food affordability and food use</li> <li>• Food security - a spectrum from food-secure to famine eg SE England compared with areas of South Sudan</li> <li>• The pattern of food security is dynamic and varies both between and within countries</li> <li>• Globalisation of the food industry means food security has international importance which can lead to international co-operation eg               <ol style="list-style-type: none"> <li>1. Agricultural trading policies at the international level covering bilateral and multilateral trade deals.</li> <li>2. The role of global organisations such as the World Trade Organisation and the Food and Agriculture Organisation of the UN.</li> <li>3. The role of international aid where trade agreements have failed to achieve food security or where natural or human induced disasters have compromised food supplies.</li> <li>4. International co-operation to share technological innovation in food production.</li> </ol> </li> </ul> <p><b>AO2 – 10 marks</b>            Application of knowledge and understanding to analyse and evaluate the extent to which international co-operation is essential to guarantee future food security could potentially include:</p> <ul style="list-style-type: none"> <li>• International organisations have varying levels of success and are open to criticisms e.g. the WTO is mostly controlled by western nations and the rights</li> </ul>

Question	Answer	Marks	Guidance
	<p><b>Level 3 (5–7 marks)</b> Demonstrates <b>thorough</b> application of knowledge and understanding to provide a clear and developed analysis that shows accuracy of how international co-operation could guarantee future food security.</p> <p>Demonstrates <b>thorough</b> application of knowledge and understanding to provide a detailed evaluation that offers generally secure judgements, with some link between rational conclusions and evidence as to whether international co-operation is essential to guarantee future food security.</p> <p><b>Level 2 (3–4 marks)</b> Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a sound analysis that shows some accuracy of how international co-operation could guarantee future food security.</p> <p>Demonstrates <b>reasonable</b> application of knowledge and understanding to provide a sound evaluation that offers generalised judgements and conclusions, with limited use of evidence as to whether international co-operation is essential to guarantee future food security.</p> <p><b>Level 1 (1–2 marks)</b> Demonstrates <b>basic</b> application of knowledge and understanding to provide a simple analysis that shows limited accuracy of how international co-operation could guarantee future food security.</p> <p>Demonstrates <b>basic</b> application of knowledge and understanding to provide an un-supported evaluation that offers simple conclusions as to whether international co-operation is essential to guarantee future food security.</p>		<p>and views of poorer nations are not represented enough, some say that the WTO is not doing enough to achieve equitable food distribution.</p> <ul style="list-style-type: none"> <li>• Some international agencies can work effectively with national governments e.g. the WFP.</li> <li>• Many question the role and effectiveness of international food aid as it often reflects the interests of donor countries rather than the needs of poorer nations receiving the aid. Food aid can:             <ol style="list-style-type: none"> <li>1. create a cycle of dependency and come with political ‘strings’ attached e.g. assurances of political support and its long-term success is questionable</li> <li>2. be effective in restoring food security in the short term as a response to a natural disaster or humanitarian crisis.</li> </ol> </li> <li>• Trade in food is a critical component to ensure future food security and to distribute food. However, again the global pattern is dominated by Europe, USA and Asia.</li> <li>• Some international food trade policies can result in food surpluses and depressed world prices that further marginalise poorer countries e.g. the EUs CAP in the 1980s.</li> </ul> <p>Outside of international cooperation other key stakeholders will have an impact on any guarantee of future food security:</p> <ul style="list-style-type: none"> <li>• TNCs which often can be more powerful than national governments in issues of food production and distribution.</li> <li>• Agribusinesses they have a direct impact on food production and distribution but profit making incentives often affect decision making.</li> </ul>

Question	Answer	Marks	Guidance
	<p><b>0 marks</b> No response worthy of credit.</p> <p><b>Quality of extended response</b></p> <p><b>Level 4</b> There is a well-developed line of reasoning which is clear and logically structured.
