

**ADVANCED SUBSIDIARY GCE UNIT
MATHEMATICS**

4721/01

Core Mathematics 1

THURSDAY 7 JUNE 2007

Morning

Time: 1 hour 30 minutes

Additional Materials: Answer Booklet (8 pages)
List of Formulae (MF1)

INSTRUCTIONS TO CANDIDATES

- Write your name, centre number and candidate number in the spaces provided on the answer booklet.
- Answer **all** the questions.
- Give non-exact numerical answers correct to 3 significant figures unless a different degree of accuracy is specified in the question or is clearly appropriate.
- **You are not permitted to use a calculator in this paper.**

INFORMATION FOR CANDIDATES

- The number of marks is given in brackets [] at the end of each question or part question.
- The total number of marks for this paper is 72.

ADVICE TO CANDIDATES

- Read each question carefully and make sure you know what you have to do before starting your answer.
- **You are reminded of the need for clear presentation in your answers.**

WARNING

**You are not allowed to use
a calculator in this paper.**

This document consists of **4** printed pages.

1 Simplify $(2x + 5)^2 - (x - 3)^2$, giving your answer in the form $ax^2 + bx + c$. [3]

2 (a) On separate diagrams, sketch the graphs of

(i) $y = \frac{1}{x}$, [2]

(ii) $y = x^4$. [1]

(b) Describe a transformation that transforms the curve $y = x^3$ to the curve $y = 8x^3$. [2]

3 Simplify the following, expressing each answer in the form $a\sqrt{5}$.

(i) $3\sqrt{10} \times \sqrt{2}$ [2]

(ii) $\sqrt{500} + \sqrt{125}$ [3]

4 (i) Find the discriminant of $kx^2 - 4x + k$ in terms of k . [2]

(ii) The quadratic equation $kx^2 - 4x + k = 0$ has equal roots. Find the possible values of k . [3]

5

The diagram shows a rectangular enclosure, with a wall forming one side. A rope, of length 20 metres, is used to form the remaining three sides. The width of the enclosure is x metres.

(i) Show that the enclosed area, $A \text{ m}^2$, is given by

$$A = 20x - 2x^2. \quad [2]$$

(ii) Use differentiation to find the maximum value of A . [4]

6 By using the substitution $y = (x + 2)^2$, find the real roots of the equation

$$(x + 2)^4 + 5(x + 2)^2 - 6 = 0. \quad [6]$$

7 (a) Given that $f(x) = x + \frac{3}{x}$, find $f'(x)$. [4]

(b) Find the gradient of the curve $y = x^{\frac{5}{2}}$ at the point where $x = 4$. [5]

- 8** (i) Express $x^2 + 8x + 15$ in the form $(x + a)^2 - b$. [3]
- (ii) Hence state the coordinates of the vertex of the curve $y = x^2 + 8x + 15$. [2]
- (iii) Solve the inequality $x^2 + 8x + 15 > 0$. [4]
- 9** The circle with equation $x^2 + y^2 - 6x - k = 0$ has radius 4.
- (i) Find the centre of the circle and the value of k . [4]
- The points $A(3, a)$ and $B(-1, 0)$ lie on the circumference of the circle, with $a > 0$.
- (ii) Calculate the length of AB , giving your answer in simplified surd form. [5]
- (iii) Find an equation for the line AB . [3]
- 10** (i) Solve the equation $3x^2 - 14x - 5 = 0$. [3]
- A curve has equation $y = 3x^2 - 14x - 5$.
- (ii) Sketch the curve, indicating the coordinates of all intercepts with the axes. [3]
- (iii) Find the value of c for which the line $y = 4x + c$ is a tangent to the curve. [6]
